SCHOOL
OF
INFORMATION AND COMMUNICATION TECHNOLOGY

COURSE STURCTURE AND DETAILED SYLLABUS

5 YEARS DUAL DEGREE B.TECH. (CSE) + M. TECH. / MBA

SPECIALIZATION:

INTELLIGENT SYSTEM

GAUTAM BUDDHA UNIVERSITY
GAUTAM BUDH NAGAR, GREATER NOIDA
2011-2012

5 Year Dual Degree B. Tech. (Computer Science & Engineering) + M.Tech. / MBA

Effective from: 2011 -2012

SEMESTER I

Sr. No.	Courses Code	Courses	L-T-P	Credits
1	CY101 / PH102	Engineering Chemistry / Engineering Physics	3-1-0	4
2	MA101	Mathematics - I	3-1-0	4
3	CE101	Engineering Mechanics	2-1-0	3
4	CS101	Computer Programming - I	2-0-0	2
5	EC101 / EE102	Basic Electronics / Electrical Technology	2-0-0	2
6	HU101	English Proficiency	2-0-0	2
7	SS101	Human Values & Buddhist Ethics	2-0-0	2
8	CY103 / PH104	Engg. Chemistry Lab / Engg. Physics Lab	0-0-2	1
9	CE103	Engineering Graphics Lab	0-0-3	2
10	CS181	Computer Programming Lab - I	0-0-2	2
11	EC181 / EE104	Basic Electronics Lab / Electrical Technology Lab	0-0-2	1
12	GP101	General Proficiency	------	1
		Total Credits		**26**
		Total Contact Hours	**16-3-10 =**	**29**

SEMESTER II

Sr. No.	Courses Code	Courses	L-T-P	Credits
1	PH102 / CY101	Engineering Physics/ Engineering Chemistry	3-1-0	4
2	MA102	Mathematics - II	3-1-0	4
3	CE106	Ecology and Environment	2-1-0	3
4	CS102	Computer Programming - II	2-0-0	2
5	EE102 / EC101	Electrical Technology / Basic Electronics	2-0-0	2
6	HU102	Professional Communication	2-0-0	2
7	SS102	History of Science & Technology	2-0-0	2
8	PH104 / CY103	Engg.. Physics Lab/ Engg.. Chemistry Lab	0-0-2	1
9	CS182	Computer Programming Lab - II	0-0-2	2
10	EE104 / EC181	Electrical Technology Lab/ Basic Electronics Lab	0-0-2	1
11	ME102	Workshop Practices	0-0-3	2
12	GP102	General Proficiency	------	1
		Total Credits		**26**
		Total Contact Hours	**16-3-9 =**	**28**

5 Year Dual Degree B. Tech. (Computer Science & Engineering) + M.Tech. / MBA

Effective from: 2011 -2012

SEMESTER – III

Sr. No.	Courses Code	Courses	L-T-P	Credits
1	MA201	Quantitative Techniques	3-1-0	4
2	EC201 / EC431	Digital Electronics	3-0-0	3
3	CS201	Internet Technology	3-0-0	3
4	CS203 / CS431	Operating System	3-0-0	3
5	CS205	Data Structure & Algorithms	2-1-0	3
6	CS207	System Analysis and Design	3-0-0	3
7	EC281 / EC483	Digital Electronics Lab	0-0-2	2
8	CS281	Internet Technology Lab	0-0-2	2
9	CS283	Data Structure and Algorithms Lab	0-0-2	2
10	GP201	General Proficiency	------	1
		Total Credits		**26**
		Total Contact Hours	**17-2-6 =**	**25**

SEMESTER – IV

Sr. No.	Courses Code	Courses	L-T-P	Credits
1	MA202	Numerical Methods of Analysis	3-1-0	4
2	EC210	Principles of Communication	2-1-0	3
3	CS202 / CS433	Software Engineering	3-0-0	3
4	CS204	Discrete Structure	3-1-0	4
5	CS206 / CS436	Data Base Management System	3-0-0	3
6	CS208	Principles of Programming Language	2-0-0	2
7	EC282	Analog Communication Lab	0-0-2	2
8	CS282	Software Engineering Lab	0-0-2	2
9	CS284	Database Management System Lab	0-0-2	2
10	GP202	General Proficiency	------	1
		Total Credits		**26**
		Total Contact Hours	**16-3-6 =**	**25**

5 Year Dual Degree B. Tech. (Computer Science & Engineering) + M.Tech. / MBA

Effective from: 2011 -2012

SEMESTER – V

Sr. No.	Courses Code	Courses	L-T-P	Credits
1	CS301	Theory of Automata	3-1-0	4
2	CS303	Web Development	3-1-0	4
3	CS305	Computer Graphics	3-1-0	4
4	CS307	Analysis and Design of Algorithms	3-1-0	4
5	CS309 / CS438	Computer Organization & Architecture	3-0-0	3
6	ME311	Principles of Technology Management	2-0-0	2
7	CS381	Web Development Lab	0-0-2	2
8	CS383	Computer Graphics Lab	0-0-2	2
9	GP301	General Proficiency	------	1
		Total Credits		**26**
		Total Contact Hours	**17-4-4 = 25**	

SEMESTER – VI

Sr. No.	Courses Code	Courses	L-T-P	Credits
1	CS302	Distributed Operating System	3-1-0	4
2	CS304	Concepts of Artificial Intelligence	3-1-0	4
3	CS306	Advanced Computer Architecture	3-1-0	4
4	CS308	Computer Networks	3-1-0	4
5	EC304 / EC559	Microprocessor and Interfacing	3-0-0	3
6	ME312	Entrepreneurship & Innovation	2-0-0	2
7	EC384/EC587	Microprocessor and Interfacing Lab	0-0-2	2
8	CS382	Computer Networks Lab	0-0-2	2
9	GP302	General Proficiency	------	1
		Total Credits		**26**
		Total Contact Hours	**17-4-4 = 25**	

5-Year Dual Degree B. Tech. (Computer Science & Engineering) + M.Tech. / MBA

Effective from: 2011 -2012

SEMESTER – VII

Sr. No.	Courses Code	Courses	L-T-P	Credits
1	SS401	Social Aspects of Engineering	2-1-0	3
2	CS401	Compiler Design	3-1-0	4
3	CS403	Object-Oriented Analysis	3-0-0	3
4	CS405	Formal Methods	3-1-0	4
5		**Elective – 1**	3-0-0	3
6	CS481	Compiler Design Lab	0-0-2	2
7	CS491	Seminar	0-0-2	2
8	CS493	Minor Project	0-0-8	4
9	GP401	General Proficiency	------	1
		Total Credits		**26**
		Total Contact Hours	**14-3-12 =**	**29**

Electives - 1		
Sr. No.	**Courses Code**	**Courses**
1	CS441 / CS541	Software Project Management
2	CS443 / CS543	Object-Oriented Software Engineering
3	CS445 / CS545	Information Security
4	CS447 / CS547	Multimedia Techniques
5	CS449 / CS561	Soft Computing
6	CS451 / CS551	Natural Language Processing
7	CS457 / CS557	Machine Translation and Learning
8	EC542	Quality of Services in Networks
9	EC447	Digital Image Processing
10	EC465 / EC555	Principles of VLSI Design
11	EC441	Design with Microcontrollers

SEMESTER VIII

5-Year Dual Degree B. Tech. (Computer Science & Engineering) + M.Tech. / MBA

Effective from: 2011 -2012

Sr. No.	Courses Code	Courses	L-T-P	Credits
1	MA402	Simulation & Modeling	3-1-0	4
2	CS406 / CS562	Soft Computing Techniques	3-0-0	3
3	CS408 / CS564	AI Programming Languages	3-0-0	3
4		**Elective-2**	3-0-0	3
5		**Elective-3**	3-0-0	3
6	CS484 / CS584	AI Programming Lab	0-0-2	2
7	CS492 / CS592	Major Project	0-0-10	5
8	GP402 / GP532	General Proficiency	------	1
		Total Credits		**24**
		Total Contact Hours	**15-1-12 =**	**28**

Electives (2 & 3)		
Sr. No.	**Courses Code**	**Courses**
1	CS462 / CS566	Knowledge Engineering
2	CS464 / CS568	Pattern Matching
3	CS466 / CS570	Neural Network
4	CS468 / CS572	Discourse Analysis and Natural Language Generation

Summer Semester (After 8th Semester)				
Sr. No.	**Courses Code**	**Courses**	**L-T-P**	**Credits**
1	CS490	Project	0-0-20	10
		Total Credits		**10**
		Total Contact Hours	0-0-20 =	**20**

SEMESTER IX

5-Year Dual Degree B. Tech. (Computer Science & Engineering) + M.Tech. / MBA

Effective from: 2011 -2012

Sr. No.	Courses Code	Courses	L-T-P	Credits
1	CS505 / CS661	Expert System	3-0-0	3
2	CS503 / CS633	Research Techniques in ICT	3-0-0	3
3		**Electives - 4**	3-0-0	3
4		**Electives - 5**	3-0-0	3
5	CS583 / CS683	Expert System Design Lab	0-0-2	2
6	CS591 / CS691	Dissertation Part - I	0-0-14	7
7	GP501 / GP631	General Proficiency	------	1
		Total Credits		**22**
		Total Contact Hours	**12-0-16 =**	**29**

Electives (4 & 5)		
Sr. No.	**Courses Code**	**Courses**
1	CS563/CS663	Intelligent Information Retrieval
2	CS565/CS665	Data Mining in AI
3	CS567/CS667	Speech Processing
4	CS569/CS669	Robotics

SEMESTER X

Sr. No.	Courses Code	Courses	L-T-P	Credits
1	CS590 / CS690	Dissertation Part - II	------	21
2	GP502 / GP632	General Proficiency	------	1
		Total Credits		**22**

GRAND TOTAL CREDITS = 260

5-Year Dual Degree B. Tech. (Computer Science & Engineering) + M.Tech. / MBA
Effective from: 2011 -2012

(SEMESTER - I)

5-Year Dual Degree B. Tech. (Computer Science & Engineering) + M.Tech. / MBA

Effective from: 2011 -2012

COMPUTER PROGRAMMING – I			
Course Code:	**CS101**	**Credits:**	**2**
No. of Lectures (Hrs/Week):	**2**	**Mid Sem Exam Hours:**	**2**
Total No. of Lectures:	**30**	**End Sem Exam Hours:**	**3**

UNIT I INTRODUCTION TO COMPUTER

Definition, characteristic, generation of computers, basic components of a computer system, memory, input, output and storage units, hard copy devices, high level language and low level language, software, system software, application software, hardware, firmware, compiler, interpreter and assembler.

UNIT II INTRODUCTION TO PROGRAMMING CONCEPT

Introduction to algorithm and flow chart; representation of algorithm using flow chart symbol, pseudo code, basic algorithm design, characteristics of good algorithm, development of algorithm.

UNIT III INTRODUCTION TO C PROGRAMMING LANGUAGE

declaring variables, preprocessor statements, arithmetic operators, programming style, keyboard input , relational operators, introduction, feature of C language, concepts, uses, basic program structure, simple data types, variables, constants, operators, comments, control flow statement :if, while, for, do-while, switch .

UNIT IV

User defined data types, arrays, declaration and operations on arrays, structure, member accessing, structure and union, array of structures, functions, declaration and use of functions, parameter passing, dynamic memory allocation.

UNIT V FUNDAMENTALS OF POINTERS

Declaration and usages of pointers, operations that can be performed on computers, use of pointers in programming exercises, parameter passing in pointers, call by value, call by references, Introduction to LINUX: LINUX structure, directory, LINUX commands.

Text Books:

1. C Programming, Herbert Shield
2. Programming in ANSI C by E. Balagurusamy, Tata Mgraw Hill.

Reference Books:

3. C Programming Language 2nd Edition by Brian, W Kernighan Pearson Education.
4. C. Puzzle Book: Puzzles For The C. Programming Language by Alan R Feuer Prentice Hall- Gale
5. Expert C Programming: Deep C Secrets (s) by Peter Van Der Linden Dorling Kindersley India.
6. Introduction To UNIX System by Morgan Rachel Tata Mcgraw Hill Education.
7. C: A Reference Manual (5th Edition) by Samuel P. Harbison &Samuel P. Harbison.
8. Programming Using the C Language by Hutchison,R.C, Mcgraw Hill Book Company, New York

5-Year Dual Degree B. Tech. (Computer Science & Engineering) + M.Tech. / MBA

Effective from: 2011 -2012

Computer Programming I Lab			
Course Code:	**CS181**	**Credits:**	**2**
No. of Lab (Hrs/Week):	**2**	**End Sem Exam Hours:**	**3**
Total No. of Lab Sessions:	**15**		

List of Experiments

1. Write a C program to reverse a given number, find the sum of digits of the number.
2. Write a C program to concatenate two strings.
3. Write a C program to take marks of a student as input and print the his/her grade bases on following criteria using if – else statements

Marks <40	FAIL
40<= Marks <59	GOOD
59 <= Marks < 80	Excellent
80 <= Marks	Outstanding

4. Perform experiment 3 using switch case statement.
5. Write a C program to compute the length of a string using while loop.
6. Write a C program to convert all the lowercase letter to uppercase letter and all uppercase letters to lower case letter given a string as input.
7. Write a C program to compute the roots of a quadratic equation.
8. Write a C program to check whether a given number is prime or not, also check whether it is divisible by a number k or not.
9. Write a C program to check whether a given year is leap year or not.
10. Write a C program to take two matrixes as input and print the sum of two matrixes.
11. Write a C program to display the address of a variable using pointer.
12. Write a C program to compute the length of a string using pointer.
13. Create a structure called STUDENT having name, registration number, class, session as its field. Compute the size of structure STUDENT.
14. Write a C program to check weather a given string is palindrome or not.
15. Write a C program to generate following patterns.

```
        1
      2   2
    3   3   3
  4   4   4   4
```

```
        A
      B   B
    C   C   C
  D   D   D   D
```

5-Year Dual Degree B. Tech. (Computer Science & Engineering) + M.Tech. / MBA

Effective from: 2011 -2012

BASIC ELECTRONICS LAB			
Course Code:	**EC181**	**Credits:**	**2**
No. of Lab (Hrs/Week):	**2**	**End Sem Exam Hours:**	**3**
Total No. of Lab Sessions:	**15**		

List of Experiments

1. Study of Multimeter and Function Generator /Counter.
2. Study of Cathode-Ray Oscilloscope.
3. To calculate the Equivalent Resistance of the Series and parallel resistive network.
4. To calculate the Equivalent Capacitance of the Series and parallel capacitive network.
5. To Plot the V-I Characteristics of P-N Junction Diode in forward bias and reverse bias.
6. To study the working of a P-N Junction Diode as a switch.
7. To plot the V-I Characteristics of a Zener Diode.
8. To plot the input and output waveforms of clipper circuits.
9. Study the Half wave rectifier.
10. Study of Full wave Bridge Rectifier.
11. Study of Centre Tapped Full Wave Rectifier.
12. To plot the input and output characteristic of transistor's Common Base configuration.
13. To plot the input and output characteristic of transistor's Common Emitter configuration.
14. To plot the input and output characteristic of transistor's Common Collector configuration.
15. To verify the truth table of various logic gates.

5-Year Dual Degree B. Tech. (Computer Science & Engineering) + M.Tech. / MBA
Effective from: 2011 -2012

(SEMESTER - II)

5-Year Dual Degree B. Tech. (Computer Science & Engineering) + M.Tech. / MBA

Effective from: 2011 -2012

COMPUTER PROGRAMMING – II			
Course Code:	**CS102**	**Credits:**	**2**
No. of Lectures (Hrs/Week):	**2**	**Mid Sem Exam Hours:**	**2**
Total No. of Lectures:	**30**	**End Sem Exam Hours:**	**3**

UNIT I OBJECT-ORIENTED PROGRAMMING

Concept of object-oriented programming (OOP), benefits of OOP, application of OOP, Java history, Java features, Java streaming, Java and Internet, Java contribution to Internet: Java applets, security, portability; Java environment, Java library, Java program structure, Java program, Java Virtual Machine (JVM) architecture, Just In Time compiler (JIT), data type, variables and arrays, operators, control statements, object-oriented paradigms; abstraction, encapsulation, inheritance, polymorphism, Java class and OOP implementation

UNIT II DATA TYPE, OPERATORS AND CONTROL STATEMENT

Data types, Java key words, identifiers, constants, variables, declaration and scope of the variable, symbolic constant, type casting, arithmetic operator, relational operator, logical operator, assignment operator, increment and decrement operator, conditional operator, bitwise operator, ?: operator, arithmetic expressions, expressions, type conversions in expressions, mathematical functions, more data types: arrays, strings, vectors, wrappers classes, program control statements: decision making and branching: if, if….else, else….if, else if ladder, switch, decision making and looping: while, do….while, for.

UNIT III CLASSES, OBJECTS AND METHODS

Java class libraries, class fundamentals, object, methods, adding variables, add methods, creating objects, accessing class members, constructors, methods overloading, static members, nesting of methods, inheritance: extending a class, overriding methods, final variables and methods, final classes, finalizer methods, abstract methods and classes, visibility control, exception handling fundamental.

UNIT IV INTERFACES AND PACKAGES

Interfaces, extending interfaces, implementing interfaces, interfaces references, accessing interface variable, creating queue interface, variable in interfaces, packages, finding a packages and classpath, package and member access, Java API package, system package, naming conventions, creating package, accessing a package, adding a class to a package, hiding classes,

UNIT V MULTITHREADING AND APPLET PROGRAMMING

Multithreading programming: creating threads, thread class and runnable interface extending the thread class, stopping and blocking a thread, life cycle of a thread, thread methods, thread exceptions, thread priority, synchronization, thread communication using notify(), wait(), and notify all(), applet programming : applet basic, applets architecture, a complete applet skeleton, building applets code, applets life cycle, creating a executable applet, designing a web page, applets tag, passing parameters to applets, applets and HTML.

Reference Books:

1. Programming with JAVA, E. Balagurusawamy, Tata McGraw Hill, 1998.
2. JAVA Beginner's guide, Herbert Schildt, Tata McGraw Hill, 2007.
3. Java How to Program, Deitel & Deitel, Prentice-Hall, 1999.
4. The Complete Reference JAVA 2, Herbert Schildt, 5th Edition, Tata McGraw Hill, 2002.
5. The Complete Reference JAVA 2, Herbert Schildt, 7th Edition, Tata McGraw Hill, 2009.
6. The Java Programming Language, Ken Arnold, James Gosling, Addison-Wesley, 1996.
7. How to Program Java, Peter Coffee, Ziff-Davis Press, 1996.

5-Year Dual Degree B. Tech. (Computer Science & Engineering) + M.Tech. / MBA
Effective from: 2011 -2012

COMPUTER PROGRAMMING-II LAB			
Course Code:	**CS182**	**Credits:**	**2**
No. of Practical (Hrs/Week):	**2**		
Total No. of Lab Sessions:	**15**	**End Sem. Exam Hours:**	**2**

Programs/Experiments List:

1. Write a separate Java Code to implement each of the following:
   Class, Command Line Argument, how to enter value through keyboard

2. Write a separate Java Code to implement each of the following data types:
   Variable, Constant, Arrays, Strings, Vectors, Wrappers Classes, Type Casting

3. Write a separate Java Code to implement each of the following operators:
   Arithmetic operator, Relational operator, Logical operator, Assignment operator, Increment & Decrement operator, Conditional operator, Bitwise operator, ?: operator

4. Write a separate Java Code to implement each of the following control statements:
   Decision statement, Loops statement and Branch statements

5. Write a separate Java Code to implement each of the following sorting:
   Bubble Sort, Selection Sort, Insertion Sort, Merge Sort

6. Write a separate Java Code to implement each of the following:
   Class, Object, Constructors, Method, Method Overloading and Method Overriding

7. Write a separate Java Code to implement each of the following:
   Final variable, final class, final method, abstract class, abstract method and concrete method

8. Write a separate Java Code to implement each of the following OOPs concepts:
   Abstraction, Polymorphism, Encapsulation, Inheritance
9. Write a separate Java Code to implement each of the following:
   Exception handling with Try, Catch, Throw, Throws, Finally
   Multiple catch statement with the following exceptions :
   ArithmeticException, ArrayOutOfBoundsException and ArrayStoreException

10. Write a separate Java Code to implement each of the following:
    Visibility Controls: Private, Public and Protected

11. Write a separate Java Code to implement each of the following:
    Interface, extending and implementing interface

12. Write a separate Java Code to implement each of the following:
    Multithreading: Create thread with thread class and runnable interface, thread priorities, synchronization

13. Write a separate Java Code to implement each of the following:
    Packages : Create package A with following methods and import this package A into another Java program to show the result of methods of package A.

i) First method: Factorial number with the help of recursion.
ii) Second method: Fibonacci Series
iii) Third Method: Generate first 10 prime numbers and show the sum of first 10 prime numbers.

14. Write Java Code to generate the following output on applet with the help of two dimensional array and show the result with the help of HTML file.

7 14 21 28 35 42 49 56 63 70	Sum = 385
5 10 15 20 25 30 35 40 45 50	Sum = 275
3 6 9 12 15 18 21 24 27 30	Sum = 165

15. Write a Java Code to design the following web page with the help of applet and HTML.

Effective from: 2011 -2012

QUANTITATIVE TECHNIQUES			
Course Code:	**MA201**	**Credits:**	**4**
No. of Lectures (Hrs/Week):	**3+1**	**Mid Sem Exam Hours:**	**2**
Total No. of Lectures:	**45+15**	**End Sem Exam Hours:**	**3**

UNIT-I

Random Events, Independent and dependent events, axioms of the theory of probability, Simple and conditional probability, Bayes theorem.

UNIT-II

One dimensional random variables (discrete and continuous), distribution of a random variable (density function and cdf), Characteristic function of a random variable and its utility, Bivariate random variable, joint, marginal and conditional distributions, joint characteristic function, Moments, Moment Generating functions, Skewness, Kurtosis.

UNIT-III

Bernoulli, Binomial, Poisson, Geometric, Uniform, Exponential, Normal, Earlang, Weibull, Method of least squares (Fitting of straight lines, Polynomials, Exponential and logarithmic curves), covariance and correlation.

UNIT-IV

Sampling theory (small and large), Test of hypothesis and significance: Chi-square test, t-test, z-test, F-test, Questionaire design.

UNIT-V

Markov chain, Chapman- Kolmogorov Equation, Classification of states.

Text Books:

1. T. Veerarajan. Probability, Statistics and Random Processes, Tata McGraw-Hill.

Reference Books:

2. V. K. Rohatgi: An Introduction to Probability Theory and Mathematical Statistics. John Wiley & Sons 1976.
3. John Freund: Introduction to Probability. Dover Publications.
4. Marylees Miller, John E. Freund, Irwin Miller: John E. Freund's Mathematical Statistics: With Applications, Prentice Hall, 2003.
5. Levin and Rubin, Statistics for Management, Prentice Hall.

5-Year Dual Degree B. Tech. (Computer Science & Engineering) + M.Tech. / MBA

Effective from: 2011 -2012

DIGITAL ELECTRONICS			
Course Code:	**EC201/EC431**	**Credits:**	**3**
No. of Lectures (Hrs/Week):	**3**	**Mid Sem Exam Hours:**	**2**
Total No. of Lectures:	**45**	**End Sem Exam Hours:**	**3**

UNIT I

Number systems & codes, Binary arithmetic Boolean algebra and switching function. Minimization of switching function, concept of prime implecant etc. Karnaugh's map method, Quine & McCluskey's method, cases with don't care terms and multiple outputs switching function. Logic gates, NAND, NOR realization of switching function; half-adder half-subtractor full-adders full-subtractor circuits. Series & parallel addition and BCD adders, look-ahead carry generator.

UNIT II

Linear wave shaping circuits, Bistable, monostable & astable multivibrators, Schmitt trigger circuits .Introduction to D/A converters. Various types of Analog to Digital & Digital to Analog converters sample & hold circuits and V-F converters.

UNIT III

Logic families: RTL, DTL, all types of TTL circuits, ECL, 12 L and PMOS, NMOS & CMOS logic etc. Gated flip-flops and gated multivibrators etc; Interfacing between TTL to MOS, vice-versa.

UNIT IV

Introduction to shift registers / ring counters synchronous & asynchronous counters and designing of combinational circuits like code converters & counters etc.

UNIT V

Semiconductor memories & designing with ROM and PLA: Decoders Encoders multiplexers & demultiplexers**.**

Text Books:

1. Tocci, "Digital Systems Principles & Applications".

5-Year Dual Degree B. Tech. (Computer Science & Engineering) + M.Tech. / MBA
Effective from: 2011 -2012

INTERNET TECHNOLOGY			
Course Code:	**CS201**	**Credits:**	**3**
No. of Lectures (Hrs/Week):	**3**	**Mid Sem Exam Hours:**	**2**
Total No. of Lectures:	**45**	**End Sem Exam Hours:**	**3**

UNIT I OVERVIEW OF INTERNET AND WEB
Introduction to internet, history of Internet and web, Internet services and accessibility, uses of internet, Internet standards, Internet protocols- IP, TCP,UDP and host names, web server, proxy server, fast ready connections on the web, web browsers, Netscape communication suite, Microsoft Internet explorer, firewalls, data security.

UNIT II WEB DESIGN
Key issues in web site design, introduction to HTML, SGML- DTD, DTD elements, attributes, outline of an HTML document, head section- prologue, link, base, meta, script, style, body section- headers, paragraphs, text formatting, linking, internal linking, embedding images, lists, tables, frames, other special tags and characters, XHTML, XML, structuring data, XML schema documents, document object model, security and management issues for creating a website.

UNIT III BROWSING SYSTEMS
Searching and web casting technique, popular web servers, basic features, bookmarks, cookies, progress indicators, customization of browsers, browsing tricks, next generation web browsing, search engines, architecture of search engines, search tools, web crawlers, types of crawlers, scalable web crawler, incremental crawler, parallel crawler, focused crawler, agent based crawler, case study of IE, counters, Internet chat, hardware and software requirements for Internet and web based applications, Internet and web technologies.

UNIT IV JAVASCRIPT
Introduction, Language elements, objects of JavaScript, other objects like data, math, string, regular expressions, arrays.

UNIT V ACTIVE SERVER PAGES
Creating interactive applications using active server pages : client and server side script in C#, variables and constants, creating modules, creating objects from classes, ASP's object model, arrays, collections, control structures, using request and response objects, integration with database.

5-Year Dual Degree B. Tech. (Computer Science & Engineering) + M.Tech. / MBA

Effective from: 2011 -2012

OPERATING SYSTEM			
Course Code:	**CS203/CS431**	**Credits:**	**3**
No. of Lectures (Hrs/Week):	**3**	**Mid Sem Exam Hours:**	**2**
Total No. of Lectures:	**45**	**End Sem Exam Hours:**	**3**

UNIT I INTRODUCTION TO OPERATING SYSTEM

Importance of operating systems, basic concepts and terminology about operating system, memory management functions, processor management functions, device management functions, information management functions.

UNIT II PROCESS MANAGEMENT

Elementary concept of process, job scheduler, process scheduling, operation on process, threads, overview, scheduling criteria, scheduling algorithms, algorithm evaluation process synchronization, synchronization hardware, semaphores, classical problem of synchronization, monitors and atomic transaction deadlocks: system model, deadlock characterization, deadlocks prevention, deadlocks avoidance, deadlocks detection, recovery from deadlock.

UNIT III MEMORY MANAGEMENT

Memory management, logical versus physical address space, swapping, contiguous allocation, paging, segmentation, demand paging, page replacement, page replacement algorithms, allocation of frames, thrashing, demand segmentation.

UNIT IV STORAGE MANAGEMENT

File concept, directory structure, protection, file-system structure, allocation method, free-space management, directory implementation.

UNIT V I/O SYSTEMS

I/O hardware, Application of I/O interface, Overview of Kernel I/O subsystem, three types of I/O systems, memory based I/O, I/O based I/O, peripheral based I/O.

Reference Books:

1. Galvin, Wiley, Operating Systems Concepts, 8th edition, 2009.

5-Year Dual Degree B. Tech. (Computer Science & Engineering) + M.Tech. / MBA
Effective from: 2011 -2012

DATA STRUCTURES AND ALGORITHMS			
Course Code:	**CS205**	**Credits:**	**3**
No. of Lectures (Hrs/Week):	**3**	**Mid Sem Exam Hours:**	**2**
Total No. of Lectures:	**45**	**End Sem Exam Hours:**	**3**

UNIT I INTRODUCTION TO DATA STRUCTURES

Abstract data types, sequences as value definitions, data types in C, pointers in C, data structures and C, arrays in C, array as ADT, one dimensional array, Implementing one dimensional array, array as parameters, two dimensional array, structures in C, implementing structures, Unions in C, implementation of unions, structure parameters, allocation of storage and scope of variables, recursive definition and processes: factorial function, fibonacci sequence, recursion in C, efficiency of recursion, hashing: hash function, open hashing, closed hashing: linear probing, quadratic probing, double hashing, rehashing, extendible hashing.

UNIT II STACK, QUEUE AND LINKED LIST

Stack definition and examples, primitive operations, example -representing stacks in C, push and pop operation implementation, queue as ADT, C Implementation of queues, insert operation, priority queue, array implementation of priority queue, inserting and removing nodes from a list-linked implementation of stack, queue and priority queue, other list structures, circular lists: stack and queue as circular list - primitive operations on circular lists, header nodes, doubly linked lists, addition of long positive integers on circular and doubly linked list.

UNIT III TREES

Binary trees: operations on binary trees, applications of binary trees, binary tree representation, node representation of binary trees, implicit array representation of binary tree, binary tree traversal in C, threaded binary tree, representing list as binary tree, finding the Kth element, deleting an element, trees and their applications: C representation of trees, tree traversals, evaluating an expression tree, constructing a tree.

UNIT IV SORTING AND SEARCHING

General background of sorting: efficiency considerations, notations, efficiency of sorting, exchange sorts: bubble sort; quick sort; selection sort; binary tree sort; heap sort, heap as a priority queue, sorting using a heap, heap sort procedure, insertion sorts: simple insertion, shell sort, address calculation sort, merge sort, radix sort, sequential search: indexed sequential search, binary search, interpolation search.

UNIT V GRAPHS

Application of graph, C representation of graphs, transitive closure, Warshall's algorithm, shortest path algorithm, linked representation of graphs, Dijkstra's algorithm, graph traversal, traversal methods for graphs, spanning forests, undirected graph and their traversals, depth first traversal, application of depth first traversal, efficiency of depth first traversal, breadth first traversal, minimum spanning tree, Kruskal's algorithm, round robin algorithm.

Text Books:

1. Aaron M. Tenenbaum, Yeedidyah Langsam, Moshe J. Augenstein, 'Data structures using C', Pearson Education, 2004 / PHI.

References Books:

2. E. Balagurusamy, 'Programming in Ansi C', Second Edition, TMH, 2003.
3. Robert L. Kruse, Bruce P. Leung Clovis L.Tondo, 'Data Structures and Program Design in C', Pearson Education, 2000 / PHI.

5-Year Dual Degree B. Tech. (Computer Science & Engineering) + M.Tech. / MBA
Effective from: 2011 -2012

SYSTEM ANALYSIS AND DESIGN			
Course Code:	**CS207**	**Credits:**	**3**
No. of Lectures (Hrs/Week):	**3**	**Mid Sem Exam Hours:**	**2**
Total No. of Lectures:	**45**	**End Sem Exam Hours:**	**3**

UNIT I DATA AND INFORMATION
Types of information: operational, tactical, strategic and statutory, why do we need information systems, management structure, requirements of information at different levels of management, functional allocation of management, requirements of information for various functions, qualities of information, small case study.

UNIT II SYSTEMS ANALYSIS AND DESIGN LIFE CYCLE
Requirements determination, requirements specifications, feasibility analysis, final specifications, hardware and software study, system design, system implementation, system evaluation, system modification, role of systems analyst, attributes of a systems analyst, tools used in system analysis

UNIT III INFORMATION GATHERING
Strategies, methods, case study, documenting study, system requirements specification, from narratives of requirements to classification of requirements as strategic, tactical, operational and statutory.

UNIT IV FEASIBILITY ANALYSIS
Deciding project goals, examining alternative solutions, cost benefit analysis, quantifications of costs and benefits, payback period, system proposal preparation for managements, parts and documentation of a proposal, tools for prototype creation.

UNIT V TOOLS FOR SYSTEMS ANALYSTS
Data flow diagrams, case study for use of DFD, good conventions, leveling of DFDs, leveling rules, logical and physical DFDs, software tools to create DFDs, decision tables for complex logical specifications, specification oriented design vs procedure oriented design

Reference Books:

1. System Analysis and Design – Elias M.Awad.
2. System Analysis and Design –Perry Edwards
3. Analysis and Design of Information Systems – James A.Senn

5-Year Dual Degree B. Tech. (Computer Science & Engineering) + M.Tech. / MBA

Effective from: 2011 -2012

INTERNET TECHNOLOGY LAB	
Course Code: CS281	Credits: 2
No. of Lab (Hrs/Week): 2	End Sem Exam Hours: 3
Total No. of Lab Sessions:15	

List of Experiments

1. Design a web page using XHTML which shows the Hyperlinks, List, Tables.
2. Design a web page in which users insert the username and password using XHTML form.
3. Design a web page using XHTML to insert an image and adding a marquee.
4. Write XML schema document for Book domain.
5. Design a website using HTML, XHTML and JavaScript.
6. Using Java Script display a line of text in a web page.
7. Using Java Script display a text in an alert Dialog box.
8. Using Java Script , take input of two integer from the user and display the result in the web page.
9. Using Java Script, Show the equality and relational operators.
10. Write a script that reads integers and determines the square root of the integer using square root method of Math object.
11. Write a script which uses the control statements.
12. Write a script that reads five integers and determines the largest and the smallest integers in the group.
13. Write a code to show connectivity between SQL server and ASP.net.
14. Introduction to different types of tools using in ASP.net Technology.
15. Design a web page using ASP.net.

5-Year Dual Degree B. Tech. (Computer Science & Engineering) + M.Tech. / MBA

Effective from: 2011 -2012

DIGITAL ELECTRONICS LAB			
Course Code:	**EC483/EC281**	**Credits:**	**2**
No. of Lab (Hrs/Week):	**2**	**End Sem Exam Hours:**	**3**
Total No. of Lab Sessions:	**15**		

List of Experiments

1. Verify the truth table of AND Gate
2. Verify the truth table of OR and NOT gates.
3. Verify the truth table of NAND , NOR Gates.
4. Verify the truth table of and EX-OR Gate.
5. Design a combinational circuit to realize the function f(ABC)=A(B+C) using NAND gates only.
6. Design a half adder using NOR gates only
7. Design full adder
8. Design a given size of Mux using gates.
9. Verify RS and JK flip flops
10. Verify D and T Flip flops
11. Design a up/down 3-bit counter
12. Design a 3 bit shift register.

5-Year Dual Degree B. Tech. (Computer Science & Engineering) + M.Tech. / MBA

Effective from: 2011 -2012

Data Structures and Algorithms Lab			
Course Code:	**CS283**	**Credits:**	**2**
No. of Lab (Hrs/Week):	**2**	**End Sem Exam Hours:**	**2**
Total No. of Lab Sessions:	**15**		

List of Experiments

1. Run time analysis of Fibonacci Series
2. Study and Application of various data Structure
3. Study and Implementation of Array Based Program
    a. Searching (Linear Search, Binary Search)
    b. Sorting (Bubble, Insertion, Selection, Quick, Merge etc)
    c. Merging
4. Implementation of Link List
    a. Creation of Singly link list, Doubly Linked list
    b. Concatenation of Link list
    c. Insertion and Deletion of node in link list
    d. Splitting the link list into two link list
5. Implementation of STACK and QUEUE with the help of
    a. Array
    b. Link List
6. Implementation of Binary Tree, Binary Search Tree, Height Balance Tree
7. Write a program to simulate various traversing Technique
8. Representation and Implementation of Graph
    a. Depth First Search
    b. Breadth First Search
    c. Prims Algorthim
    d. Kruskal's Algorithms
9. Implementation of Hash Table

5-Year Dual Degree B. Tech. (Computer Science & Engineering) + M.Tech. / MBA
Effective from: 2011 -2012

(SEMESTER - IV)

5-Year Dual Degree B. Tech. (Computer Science & Engineering) + M.Tech. / MBA
Effective from: 2011 -2012

NUMERICAL METHODS FOR ANALYSIS			
Course Code:	**MA202**	**Credits:**	**4**
No. of Lectures (Hrs/Week):	**3+1**	**Mid Sem Exam Hours:**	**2**
Total No. of Lectures:	**45+15**	**End Sem Exam Hours:**	**3**

UNIT-I
Zeroes of transcendental and polynomials, Bisection method, Regula-falsi method and Newton-Raphson method, Secant Method, Rate of convergence of above methods.

UNIT-II
Interpolation, Finite differences, difference tables, Newton's forward and backward interpolation, Divided differences, Lagrange's and Newton's divided difference formula for unequal intervals, Error analysis, Least square approximation.

UNIT-III
Numerical differentiation, Numerical integration, Error Analysis, Newton-Cote quardrature formulae, Trapezoidal, Simpson's one third and three-eight rules.

UNIT IV
Solution of system of linear equations, (Direct and Indirect Methods) Gauss- Seidal method, Gauss-Jordan Method, Crout method, Gauss-elimination and LU-Decomposition, successive-overrelaxation, Power method for largest eigenvalue, Jacobi method for real symmetric matrices.

UNIT V
Numerical Solutions of ODE and PDE: Runge-Kutta and predictor corrector methods for IVPs. Finite difference methods for BVPs, Numerical solutions of parabolic and elliptic partial differential equations, Finite element method.

Text Books:
1. Gerald C.F., Wheatley P.O., Applied Numerical Analysis, 6th Ed., Pearson Education, 1999.
2. Gupta R.S., Elements of Numerical Analysis, 1st Ed., Macmillan 2009.

Reference Books:
1. Jain M.K., Iyen S.R.K., Jain R.K.: Numerical Methods for Scientific and Engineering Computation 5th Ed., New Age International, New Delhi, 2007.
2. Smith G.D. : Numerical Solution of Partial Differential Equations, 2nd Ed., Oxford, 1978.

5-Year Dual Degree B. Tech. (Computer Science & Engineering) + M.Tech. / MBA

Effective from: 2011 -2012

PRINCIPLES OF COMMUNICATION			
Course Code:	**EC210**	**Credits:**	**3**
No. of Lectures (Hrs/Week):	**2+1**	**Mid Sem Exam Hours:**	**2**
Total No. of Lectures:	**30+15**	**End Sem Exam Hours:**	**3**

UNIT I LINEAR MODULATION

Modulation techniques: need and types of modulation techniques, amplitude modulation, frequency spectrum, power distribution, generation and detection of AM, comparision of various AM systems, synchronous detection technique, error in synchronous detection, SSB signal detection, Frequency Division Multiplexing(FDM).

UNIT I ANGLE MODULATION

Frequency and phase modulation, frequency spectrum, bandwidth requirement, frequency and phase deviation, modulation index, narrowband FM, wide band FM & their spectrum, FM modulators: Direct (Parameter Variation Method) and Indirect (Armstrong) method of frequency modulation. FM Detector: slope detector, foster seely discriminator, ratio detector and PLL detectors, pre-emphasis & de-emphasis, capture effect.

UNIT III SAMPLING AND RECONSTRUCTION:

Sampling of signal, sampling theorem for low pass and band pass signals, aliasing, Pulse Amplitude Modulation (PAM), Time Division Multiplexing (TDM), types of sampling, PAM, PWM and PPM, Pulse Code Modulation: quantization, quantization error, signal-to-noise ratio in PCM, companding, line coding, Differential PCM (DPCM), Delta Modulation (DM), Adaptive Delta Modulation (ADM), slope overload error, granular noise.

UNIT IV DIGITAL MODULATION TECHNIQUES :Amplitude Shift Keying (ASK), Binary Phase Shift Keying (BPSK), Differential Phase Shift Keying (DPSK), Quadrature Phase Shift Keying (QPSK), M-ary PSK, Binary Frequency Shift Keying (BFSK), M-ary FSK, Minimum Shift Keying, Quadrature Amplitude Modulation (QAM), probability of error, Bit Error Rate (BER), comparison of digital modulation techniques on the basis of probability of error, matched filter.

UNIT V INFORMATION THEORY AND CODING:

Information, amount of information, unit of information, average information or entropy, information rate, joint and conditional entropy, discrete memory less channel, special channels, mutual information and channel capacity, mutual information and channel capacity for special channels, shannon's theorem, shannon- hartley theorem, bandwidth & s/n trade off, source coding, code length and code efficiency, source coding theorem, fixed length codes, variable length codes, source coding techniques: Shannon Fano and Huffman coding algorithms, linear block codes, systematic linear blocks codes, parity check matrix, syndrome testing, cyclic code, hamming code, error detection and correction codes, convolution codes

Text Books:

1. Lathi B.P., Analog and Digital Communication systems, 3/E Oxford Press, 2007
2. Taub & Schilling, Principles of communication systems, 3/E McGraw Hill, 2000.
3. B. Sklar, Digital Communication, Pearson Education

Reference Books:

4. Taub & Schilling, Principles of Communication system, TMH.
5. Singh and Sapre: Communication System, TMH

12. Haykin Simon, Communication Systems,4/E John Willey & Sons, 2006.

5-Year Dual Degree B. Tech. (Computer Science & Engineering) + M.Tech. / MBA

Effective from: 2011 -2012

SOFTWARE ENGINEERING			
Course Code:	**CS202/CS433**	**Credits:**	**3**
No. of Lectures (Hrs/Week):	**3**	**Mid Sem Exam Hours:**	**2**
Total No. of Lectures:	**45**	**End Sem Exam Hours:**	**3**

UNIT I SOFTWARE ENGINEERING

Introduction to software engineering: definitions, role of software engineering, planning a software project, defining the problem, developing a solution strategy, planning the development process, software engineering process paradigms, principles of software engineering, software engineering activities.

UNIT II REQUIREMENT ANALYSIS AND DESIGN

Software Requirement Specification (SRS): Introduction, need of SRS, significance, characteristics of SRS, Structure of SRS, IEEE standards for SRS design, functional and non-functional requirements, Requirement gathering and analysis, requirement engineering and management.

UNIT III SOFTWARE DESIGN PROCESS

Software Design: Introduction, design process activities: architectural design, Abstract specification, Interface design, component design, data structure design, algorithm design modular approach, top-down design, bottom-up design, design methods: data-flow model: data flow diagram, entity-relation-attribute model: E-R diagram, structural model: structure charts, context diagrams, object models: use case modeling, use case diagrams, sequence diagrams, cohesion and coupling.

UNIT IV SOFTWARE LIFE CYCLE MODELS

Software Development Life Cycle (SDLC), SDLC models, waterfall model and its variations, prototype model, iterative enhancement model, spiral model, RAD model, comparison of these models, software development teams, software development environments, validation and traceability, maintenance, prototyping requirements, Software project management.

UNIT V SOFTWARE TESTING AND MAINTENANCE

Testing Methods: unit testing, integration testing, system testing, acceptance testing, testing techniques: white box testing, black box testing, thread testing, regression testing, alpha testing, beta testing, static testing, dynamic testing, Evolution of software products, economics of maintenance, category of software maintenance, Role of product development life cycle, deployment model, adaptive maintenance, corrective maintenance, perfective maintenance, enhancement request, proactive defect prevention, problem reporting, problem resolution, software maintenance from customers' perspective, maintenance standard: IEEE-1219, ISO-12207.

Reference Books:

1. Pankaj Jalote, An Integrated Approach to Software Engineering, Narosa Publishing House, New Delhi 1997.
2. Ian Sommerville, Software Engineering, Pearson Education, 2009.
3. Pressman Roger S., Software Engineering: Practitioner's Approach, McGraw-Hill Inc., 2004.
4. Software Engineering: Software Reliability, Testing and Quality Assurance, Nasib S. Gill, Khanna Book Publishing Co (P) Ltd., New Delhi, 2002.

5-Year Dual Degree B. Tech. (Computer Science & Engineering) + M.Tech. / MBA

Effective from: 2011 -2012

DISCRETE STRUCTURE			
Course Code:	**CS204**	**Credits:**	**4**
No. of Lectures (Hrs/Week):	**3+1**	**Mid Sem Exam Hours:**	**2**
Total No. of Lectures:	**45+15**	**End Sem Exam Hours:**	**3**

UNIT I MATHEMATICAL LOGIC

Statements and notations, connectives, well formed formulas, truth tables, tautology, equivalence implication, normal forms, predicates: predicative logic, free & bound variables, rules of inference, consistency, proof of contradiction, automatic theorem proving.

UNIT II SET THEORY

Properties of binary relations, equivalence, compatibility and partial ordering relations, hasse diagram. functions: inverse function comports of functions, recursive functions, lattice and its properties, pigeon hole principles and its application, algebraic structures: algebraic systems examples and general properties, semi groups and monads, groups sub groups' homomorphism, isomorphism.

UNIT III ELEMENTARY COMBINATORICS

Basis of counting, combinations & permutations, with repetitions, constrained repetitions, binomial coefficients, binomial multinomial theorems, the principles of inclusion – exclusion.

UNIT IV RECURRENCE RELATION

Generating functions, function of sequences calculating coefficient of generating function, recurrence relations, solving recurrence relation by substitution and generating funds, characteristics roots solution of in homogeneous recurrence relation.

UNIT V GRAPH THEORY

Representation of graph, DFS, BFS, spanning trees, planar graphs. graph theory and applications, basic concepts isomorphism and sub graphs, multi graphs and euler circuits, hamiltonian graphs, chromatic numbers

Text Books :

1. Discrete and Combinational Mathematics- An Applied Introduction-5th Edition – Ralph. P.Grimaldi, Pearson Education
2. Discrete Mathematical Structures with applications to computer science Trembly J.P. & Manohar .P, TMH
3. Discrete Mathematics and its Applications, Kenneth H. Rosen, Fifth Edition.TMH.

Reference Books:

4. Discrete Mathematics with Applications, Thomas Koshy, Elsevier
5. Discrete Mathematical Structures, Bernand Kolman, Roberty C. Busby, Sharn Cutter Ross, Pearson Education/PHI.
6. Discrete Mathematical structures Theory and application-Malik & Sen
7. Discrete Mathematics for Computer science, Garry Haggard and others, Thomson.
8. Discrete Mathematics for Computer Scientists & Mathematicians, J.L. Mott, A. Kandel, T.P. Baker Prentice Hall.
9. Logic and Discrete Mathematics, Grass Man & Trembley, Person Education.

5-Year Dual Degree B. Tech. (Computer Science & Engineering) + M.Tech. / MBA

Effective from: 2011 -2012

DATABASE MANAGEMENT SYSTEM			
Course Code:	**CS206/CS436**	**Credits:**	**3**
No. of Lectures (Hrs/Week):	**3**	**Mid Sem Exam Hours:**	**2**
Total No. of Lectures:	**45**	**End Sem Exam Hours:**	**3**

UNIT I DATA BASE SYSTEM

Data base system vs. file system, view of data, data abstraction, instances and schemas, data models, ER model, relational model, database languages, DDL, DML, database access for applications programs, data base users and administrator, transaction management, data base system structure, storage manager, query processor, history of data base systems, data base design and ER diagrams, beyond ER design entities, attributes and entity sets, relationships and relationship sets, additional features of ER model, concept design with the ER model, and conceptual design for large enterprises.

UNIT II RELATIONAL MODEL

Introduction to the relational model, integrity constraint over relations, enforcing integrity constraints, querying relational data, and logical data base design, destroying /altering tables and views. relational algebra and calculus: relational algebra, selection and projection set operations, renaming, joins, division, relational calculus, tuple relational calculus, domain relational calculus, expressive power of algebra and calculus.

UNIT III BASIC SQL QUERY

Examples of basic SQL queries, nested queries, correlated nested queries set, comparison operators, aggregative operators, NULL values, comparison using null values, logical connectivity's, AND, OR and NOTR, impact on SQL constructs, outer joins, disallowing NULL values, complex integrity constraints in SQL triggers and active data bases.

UNIT IV SCHEMA REFINEMENT

Problems caused by redundancy, decompositions, problem related to decomposition, reasoning about FDS, FIRST, SECOND, THIRD normal form, BCNF, forth normal form, lossless join decomposition, dependency preserving decomposition, schema refinement in data base design, multi valued dependencies.

UNIT V OVERVIEW OF TRANSACTION MANAGEMENT

ACID properties, transactions and schedules, concurrent execution of transaction, lock based concurrency control, performance locking, and transaction support in SQL, crash recovery, concurrency control, Serializability and recoverability, lock management, lock conversions, dealing with dead locks, specialized locking techniques, concurrency without locking, crash recovery: ARIES, log, other recovery related structures, the write, ahead log protocol, check pointing, recovering from a system crash, media recovery, other approaches and interaction with concurrency control.

References Books:

1. Elmasri Navrate, Data Base Management System, Pearson Education, 2008.
2. Raghurama Krishnan, Johannes Gehrke, Data Base Management Systems, TMH, 3rd edition, 2008.

4. Silberschatz, Korth, Database System Concepts, McGraw hill, 5^{th} edition, 2005.
5. Rob, Coronel & Thomson, Database Systems Design: Implementation and Management, 2009.

5-Year Dual Degree B. Tech. (Computer Science & Engineering) + M.Tech. / MBA

Effective from: 2011 -2012

PRINCIPLES OF PROGRAMMING LANGUAGE			
Course Code:	**CS208**	**Credits:**	**2**
No. of Lectures (Hrs/Week):	**2**	**Mid Sem Exam Hours:**	**2**
Total No. of Lectures:	**30**	**End Sem Exam Hours:**	**3**

UNIT I INTRODUCTION

Characteristics of programming Languages, Factors influencing the evolution of programming language, developments in programming methodologies, desirable features and design issues. Programming language processors: Structure and operations of translators, software simulated computer, syntax, semantics, structure, virtual computers, binding and binding time.

UNIT II ELEMENTARY AND STRUCTURED DATA TYPES

Data object variables, constants, data types, elementary data types, declaration, assignment and initialization, enumeration, characters, strings. Structured data type and objects: Specification of data structured types, vectors and arrays, records, variable size data structure, pointers and programmer constructed data structure, Sets files. Sub Program and programmer defined data types: Evolution of data types, abstractions, encapsulations, information hiding, sub programms, abstract data types.

UNIT III SEQUENCE CONTROL

Implicit and Explicit sequence control, sequence control with within expression and statements, recursive sub programmes, exception handling, co routines, scheduled sub programmes, concurrent execution. Data control referencing environments, static and dynamic scope, local data local data referencing environment, shared data: explicit common environment dynamic scope parameter passing mechanism.

UNIT IV STORAGE MANAGEMENT

Major run time requirements, storage management phases, static storage management, stack based, heap based storage management. Syntax and translation: General syntactic criteria, syntactic element of a language, stages in translation, formal syntax and semantics.

UNIT V OPERATING AND PROGRAMMING ENVIRONMENT

Batch processing environments, embedded system requirements, theoretical models, introduction to functional programming, lambda calculus, data flow language and object oriented language, comparison in various general and special purpose programming languages e.g. fortran, C, Pascal, Lisp, etc.

5-Year Dual Degree B. Tech. (Computer Science & Engineering) + M.Tech. / MBA

Effective from: 2011 -2012

Software Engineering Lab			
Course Code:	**CS282**	**Credits:**	**2**
No. of Lab (Hrs/Week):	**2**	**End Sem Exam Hours:**	**3**
Total No. of Lab Sessions:	**15**		

1. Introduction and project definition.
2. Software process overview with configuration management tool.
3. Design the software requirements by using Requisite Pro.
4. Introduction to UML and use case diagrams with the help of Rational Rose.
5. System modelling and design of DFD and ER diagram.
6. Design of Flow of events and activity diagram by using Rational Rose.
7. OO analysis and discovering classes with the help of Requisite Pro.
8. Design the Interaction diagrams, sequence and collaboration diagrams with the help of software engineering tool.
9. Software architecture and object-oriented design by using Rational Rose.
10. Draw the traceability matrix with the help of designing the requirements and feature matrix.

5-Year Dual Degree B. Tech. (Computer Science & Engineering) + M.Tech. / MBA

Effective from: 2011 -2012

DATABASE MANAGEMENT SYSTEM LAB			
Course Code:	**CS284**	**Credits:**	**2**
No. of Lab (Hrs/Week):	**2**	**End Sem Exam Hours:**	**3**
Total No. of Lab Sessions:	**15**		

List of Experiments

1. Introduction to MySQL, an exercise of data types in MySQL & Data Definition Language Commands
2. Exercise on Data Manipulation Language and Transaction Control Commands
3. Exercise on Types of Data Constraints
4. Exercise on JOINS (Single-Table) Using Normalization
5. Exercise on JOINS (Multiple-Table) Using Normalization
6. Exercise on GROUP BY/ORDER BY Clause and Date Arithmetic
7. Exercise on different Functions (Aggregate, Math and String)
8. Exercise on different types of sub queries
9. Introduction to Procedures
10. Introduction to View
11. Introduction to Triggers

5-Year Dual Degree B. Tech. (Computer Science & Engineering) + M.Tech. / MBA
Effective from: 2011 -2012

(SEMESTER - V)

5-Year Dual Degree B. Tech. (Computer Science & Engineering) + M.Tech. / MBA

Effective from: 2011 -2012

THEORY OF AUTOMATA			
Course Code:	**CS301**	**Credits:**	**4**
No. of Lectures (Hrs/Week):	**3+1**	**Mid Sem Exam Hours:**	**2**
Total No. of Lectures:	**45+15**	**End Sem Exam Hours:**	**3**

UNIT I AUTOMATA

Introduction; alphabets, strings and languages; automata and grammars, deterministic finite automata (DFA)-formal definition, simplified notation: state transition graph, transition table, language of DFA, Nondeterministic finite Automata (NFA), NFA with epsilon transition, language of NFA, equivalence of NFA and DFA, minimization of finite automata, distinguishing one string from other, Myhill-Nerode Theorem

UNIT II REGULAR EXPRESSIONS AND LANGUAGES

Regular expression (RE), definition, operators of regular expression and their precedence, algebraic laws for regular expressions, Kleen's theorem, regular expression to FA, DFA to regular expression, arden theorem, non regular languages, pumping lemma for regular languages. application of pumping lemma, closure properties of regular languages, decision properties of regular languages, FA with output: moore and mealy machine, equivalence of moore and mealy machine, applications and limitation of FA.

UNIT III CONTEXT-FREE GRAMMAR AND LANGUAGES

Context Free Grammar (CFG) and Context Free Languages (CFL): definition, examples, derivation, derivation trees, ambiguity in grammar, inherent ambiguity, ambiguous to unambiguous CFG, useless symbols, simplification of CFGs, normal forms for CFGs: CNF and GNF, closure properties of CFLs, decision properties of CFLs: emptiness, finiteness and membership, pumping lemma for CFLs,

UNIT IV PUSH DOWN AUTOMATA

Push Down Automata (PDA): description and definition, instantaneous description, language of PDA, acceptance by final state, acceptance by empty stack, deterministic PDA, equivalence of PDA and CFG, CFG to PDA and PDA to CFG, two stack PDA

UNIT V TURING MACHINES (TM)

Basic model, definition and representation, instantaneous description, language acceptance by TM, variants of turing machine, TM as computer of integer functions, universal TM, church's thesis recursive and recursively enumerable languages, halting problem, introduction to undecidability, undecidable problems about TMs. Post Correspondence Problem (PCP), modified PCP, introduction to recursive function theory.

5-Year Dual Degree B. Tech. (Computer Science & Engineering) + M.Tech. / MBA

Effective from: 2011 -2012

WEB DEVELOPMENT			
Course Code:	**CS303**	**Credits:**	**4**
No. of Lectures (Hrs/Week):	**3+1**	**Mid Sem Exam Hours:**	**2**
Total No. of Lectures:	**45+15**	**End Sem Exam Hours:**	**3**

UNIT I INTRODUCTION TO .NET

.NET, advantages of .NET, Common Language Runtime (CLR), CLR architecture, Just-in-time complier, Microsoft Intermediate Language, IL with IL Disassembler, framework, types and version of framework, common class library, common type system, common language specifications, languages under .NET.

UNIT II LANGUAGE FUNDAMENTALS

Basic programming rules, data types, variable declaration and initialization, using the *using* and *imports* keywords, literals, unicode characters and strings, operators, conditional statements, looping statements, arrays, structures, concept of class and objects, creating and using class library, creating and using namespaces, oops paradigm: encapsulation, abstraction, polymorphism, inheritance.

UNIT III VISUAL BASIC PROGRAMMING

Creating interactive applications using active server pages: client and server side script in C#, creating modules, creating objects from classes, flow control and exception handling, working with windows and web forms, mouse event, hiding and displaying controls, button control, label control, TextBox control, radio button control, check box control, list box control, using request and response objects, integration with database, ADO.NET.

UNIT IV JAVA SERVER PAGES (JSP)

Evolution of web application, overview of Hyper Text Transfer Protocol, servlet, servlet life cycle, servlet classes, threading models, HTTP session, Java Server Pages, JSP syntax and sementics, expression, scriptlets and declaration, request dispatching, session and thread management.

UNIT V JSP APPLICATIONS AND JDBC

Develop and deploy web application with JSP, JSP and XML, JSP testing and debugging, JDBC,

Text Books:

5-Year Dual Degree B. Tech. (Computer Science & Engineering) + M.Tech. / MBA

Effective from: 2011 -2012

COMPUTER GRAPHICS			
Course Code:	**CS305**	**Credits:**	**4**
No. of Lectures (Hrs/Week):	**3+1**	**Mid Sem Exam Hours:**	**2**
Total No. of Lectures:	**45+15**	**End Sem Exam Hours:**	**3**

UNIT I INTRODUCTION

Application areas of Computer Graphics, overview of graphics systems, video-display devices, raster-scan systems, random scan systems, graphics monitors and work stations and input devices, Output primitives : Points and lines, line drawing algorithms, mid-point circle and ellipse algorithms. Filled area primitives: Scan line polygon fill algorithm, boundary-fill and flood-fill algorithms

UNIT II 2-D GEOMETRICAL TRANSFORMS

Translation, scaling, rotation, reflection and shear transformations, matrix representations and homogeneous coordinates, composite transforms, transformations between coordinate systems, 2-D viewing : The viewing pipeline, viewing coordinate reference frame, window to view-port coordinate transformation, viewing functions, Cohen-Sutherland and Cyrus-beck line clipping algorithms, Sutherland –Hodgeman polygon clipping algorithm

UNIT III REPRESENTATION AND TRANSFORMATION

3-D object representation Polygon surfaces, quadric surfaces, spline representation, Hermite curve, Bezier curve and B-Spline curves, Bezier and B-Spline surfaces, basic illumination models, polygon rendering methods, 3-D Geometric transformations: Translation, rotation, scaling, reflection and shear transformations, composite transformations, 3-D viewing: Viewing pipeline, viewing coordinates, view volume and general projection transforms and clipping

UNIT IV VISIBLE SURFACE DETECTION METHODS

Classification, back-face detection, depth-buffer, scan-line, depth sorting, BSP-tree methods, area sub-division and octree methods.

UNIT V COMPUTER ANIMATION

Design of animation sequence, general computer animation functions, raster animation, computer animation languages, key frame systems, motion specifications.

References Books :

2. “Computer Graphics Principles & practice”, second edition in C, Foley, VanDam, Feiner and Hughes, Pearson Education.

5-Year Dual Degree B. Tech. (Computer Science & Engineering) + M.Tech. / MBA

Effective from: 2011 -2012

ANALYSIS AND DESIGN OF ALGORITHMS			
Course Code:	**CS307**	**Credits:**	**4**
No. of Lectures (Hrs/Week):	**3+1**	**Mid Sem Exam Hours:**	**2**
Total No. of Lectures:	**45+15**	**End Sem Exam Hours:**	**3**

UNIT I BASIC CONCEPTS OF ALGORITHMS

Introduction, notion of algorithm, fundamentals of algorithmic solving, important problem types, fundamentals of the analysis framework, asymptotic notations and basic efficiency classes.

UNIT II MATHEMATICAL ASPECTS AND ANALYSIS OF ALGORITHMS

Mathematical analysis of non-recursive algorithm, mathematical analysis of recursive algorithm, example: fibonacci numbers, empirical analysis of algorithms, algorithm visualization.

Unit III ANALYSIS OF SORTING AND SEARCHING ALGORITHMS

Brute force, selection sort and bubble sort, sequential search and brute-force string matching, divide and conquer, merge sort, quick sort, binary search, binary tree, traversal and related properties, decrease and conquer, insertion sort, depth first search and breadth first search.

UNIT IV ALGORITHMIC TECHNIQUES

Transform and conquer ,presorting, balanced search trees, avl trees, heaps and heap sort, dynamic programming, Warshall's and Floyd's algorithm, optimal binary search trees, greedy techniques, Prim's algorithm, Kruskal's algorithm, Dijkstra's algorithm, Huffman trees.

UNIT V ALGORITHM DESIGN METHODS

Backtracking, n-Queen's problem, Hamiltonian circuit problem, subset-sum problem, branch and bound, assignment problem, knapsack problem, traveling salesman problem.

Effective from: 2011 -2012

COMPUTER ORGANIZATION & ARCHITECTURE			
Course Code:	**CS309/CS438**	**Credits:**	**3**
No. of Lectures (Hrs/Week):	**3**	**Mid Sem Exam Hours:**	**2**
Total No. of Lectures:	**45**	**End Sem Exam Hours:**	**3**

UNIT I COMPUTER ARITHMETIC AND NUMBER SYSTEM

Number representation; number system, fixed and floating point number representation, arithmetic algorithms (addition, subtraction, booth multiplication).

UNIT II REGISTER TRANSFER AND MICROOPERATION

Register transfer language, bus and memory transfers, bus architecture, bus arbitration, arithmetic logic, shift microoperation, arithmetic logic shift unit, design of fast address.

UNIT II PROCESSOR DESIGN

Processor organization: general register organization, stack organization, addressing mode, instruction format, data transfer & manipulations, program control, reduced instruction set computer.

UNIT IV INPUT-OUTPUT ORGANIZATION

I/O interface, synchronous and asynchronous data transfer, strobe, handshaking schemes, modes of transfer, interrupts & interrupt handling, direct memory access, input-output processor.

UNIT V MEMORY ORGANIZATION

Memory hierarchy, main memory (RAM and ROM Chips), organization of 2d and $2^{1/2}$ d, auxiliary memory, cache memory, virtual memory, memory management hardware.

Effective from: 2011 -2012

DISTRIBUTED OPERATING SYSTEM			
Course Code:	**CS302**	**Credits:**	**4**
No. of Lectures (Hrs/Week):	**3+1**	**Mid Sem Exam Hours:**	**2**
Total No. of Lectures:	**45+15**	**End Sem Exam Hours:**	**3**

UNIT I INTRODUCTION TO DISTRIBUTED SYSTEMS

Distributed systems : goals hardware concepts software, design, communication distributed systems: layered protocol: ATM networks client server model, remote procedure call, group communication.

UNIT II SYNCHRONIZATION

Clock synchronization, mutual exclusion, election atomic transactions, dead locks, process and processors: threads, system models processor, Allocation, scheduling fault tolerance, real time distributed systems.

UNIT III DISTRIBUTED FILE SYSTEMS

File system design and implementation, trends in distributed file systems.

UNIT IV SHARED MEMORY

Introduction, bus based multi processors ring based multiprocessors switched multiprocessors - NUMA comparison of shared memory systems.

UNIT V

consistency models, page based distributed shared memory, shared variable distributed shared memory, object based distributed shared memory.

Reference Books:

1. Andrew S.Tanenbaum: Distributed Operating System, Prentice Hall International Inc. 1995.
2. A.S. Tanenbaum, Modern Operating Systems, Pearson Education Asia, 2001.
3. M. Singhal and N. G. Shivaratri, Advance Concepts in Operating Systems, McGraw-Hill, 1994.
4. J. W. S. Liu, Real-Time Systems, Pearson Education, 2000.

5-Year Dual Degree B. Tech. (Computer Science & Engineering) + M.Tech. / MBA

Effective from: 2011 -2012

CONCEPTS OF ARTIFICIAL INTELLIGENCE			
Course Code:	**CS304**	**Credits:**	**4**
No. of Lectures (Hrs/Week):	**3+1**	**Mid Sem Exam Hours:**	**2**
Total No. of Lectures:	**45+15**	**End Sem Exam Hours:**	**3**

UNIT I INTRODUCTION TO ARTIFICIAL INTELLIGENCE

Basic concept of artificial intelligence (AI), history of AI, AI and consciousness, weak and strong AI, physical symbol system hypothesis, comparison of computer and human skills, practical systems based on AI, development of logic, components of AI.

UNIT II PROBLEM SOLVING THROUGH AI

Defining problem as state space search, analyzing the problem, representing the problems from AI viewpoint, production system, developing production rules, characteristics of production system, algorithm for problem solving using AI technique.

UNIT III SEARCH TECHNIQUES

Use of search in AI problem solution, blind search techniques, heuristic search techniques, concept of heuristic knowledge, designing of the heuristic function, types of heuristic search techniques: generate and test, best first search, problem reduction using AND – OR graph, local search technique, branch and bound search, memory bounded search technique, local beam search, properties of heuristic search techniques, overestimation and underestimation of heuristic function, hill climbing search, simulated annealing search, constraint satisfaction, means ends analysis.

UNIT IV INTRODUCTION TO LOGIC

Introduction, propositional calculus, syntax of propositional calculus, semantics of propositional calculus, well formed formula, properties of statements, inferencing of propositional logic, predicate logic, syntax of predicate logic, semantics of predicate logic, representation of facts First Order Predicate Logic (FOPL), inferencing in predicate logic, concept of resolution, resolution algorithm, skolemization, Types of resolution, unit resolution, binary resolution.

UNIT V PROLOG and LISP

Basic concept of programming languages related to artificial intelligence problems, concept of programming in Logic, basic prolog constructs, atoms, defining the rules, writing small programs in prolog, concept of list processing, basic LISP constructs, writing functions in LISP, some simple programs of LISP.

Reference books:

1. Artificial Intelligence, Elanie Reich: Tata mcgraw Hill publishing house, 2008.
2. Artificial intelligence, Peterson, TataMcGraw Hill, 2008.
3. Artificial intelligence, Russel and Norvig, Pearson Printice Hall Publication, 2006.
4. Artificial Intelligence, Winston, PHI publication, 2006.

5-Year Dual Degree B. Tech. (Computer Science & Engineering) + M.Tech. / MBA

Effective from: 2011 -2012

ADVANCED COMPUTER ARCHITECTURE			
Course Code:	**CS306**	**Credits:**	**4**
No. of Lectures (Hrs/Week):	**3+1**	**Mid Sem Exam Hours:**	**2**
Total No. of Lectures:	**45+15**	**End Sem Exam Hours:**	**3**

UNIT I INTRODUCTION TO PARALLEL PROCESSING

Parallelism in uniprocessor system, basic uniprocessor architecture, parallel processing mechanism, balancing of sub system bandwidth, multiprogramming and time sharing, parallel computer structures, pipeline computers, array computers, multiprocessor systems, dataflow computer concept, architectural classification scheme: multiplicity of instruction-data streams, serial versus parallel processing, parallelism versus pipelining, parallel processing applications, productive modeling simulation, engineering design and automation.

UNIT II PRINCIPLES OF PIPELINING AND VECTOR PROCESSING

Pipelining- an overlapped parallelism, principles of linear pipelining, clock period, efficiency, throughput, classification of pipeline processors, general pipeline and reservation tables.

UNIT III PRINCIPLES OF DESIGNING PIPELINE PROCESSORS

Effect of branching , data buffering and bussing structures, internal forwarding and register tagging, hazard detection and resolution, job sequencing and collision prevention, reservation and latency analysis, collision free scheduling, state diagram, greedy cycle, pipeline schedule optimization, pipeline throughput, pipeline efficiency.

UNIT IV STRUCTURE AND ALGORITHM FOR ARRAY PROCESSORS

SIMD array processor, SIMD computer organization, inter –PE communication, SIMD interconnection network, static versus dynamic networks, cube interconnection network, shuffle-exchange omega networks, parallel algorithms and SIMD matrix multiplication.

UNIT V MULTIPROCESSOR ARCHITECTURE AND SCHEDULING

Functional structure, loosely coupled and tightly coupled multiprocessor, deterministic scheduling strategy, deterministic scheduling model, control flow versus data flow computer, data flow graphs and languages.

Effective from: 2011 -2012

COMPUTER NETWORKS			
Course Code:	**CS308**	**Credits:**	**4**
No. of Lectures (Hrs/Week):	**3+1**	**Mid Sem Exam Hours:**	**2**
Total No. of Lectures:	**45+15**	**End Sem Exam Hours:**	**3**

UNIT I INTRODUCTION AND PHYSICAL LAYER

Key concepts of computer network, transmission media, network devices, network topology, topology design issues, types of network: LAN, MAN, WAN, PAN, ISDN systems and ATM network, OSI-reference model, open system standards, characteristics of network, TCP/IP model, protocols and standards, encoding technique.

UNIT II SWITCHING AND DATA LINK LAYER

Circuit switching, packet switching, message switching, hybrid switching, and ATM switching, multiplexing techniques: TDMA, FDMA, WDMA, CDMA, data link layer: LLC & MAC level protocols and design issues, issues IEEE 802 LAN Standards, framing, CRC, error control, flow control, HDLC, ALOHA and performance issues. Frames relay networks and performance parameters.

UNIT III NETWORK LAYER

Network layer design issues, overview of IPv4 and IPv6, addressing: class full and classless, static and dynamic, subnet and supernet, autoconfiguration through DHCP, routing protocols: RIP, DVR,LSR, OSFP, BGP, congestion control algorithm, subnet concept, virtual LAN, ICMP, multicasting, mobile IP.

UNIT IV TRANSPORT LAYER

Port addressing schemes, connectionless and connection oriented services: TCP and UDP, wireless TCP, Congestion control, queue management, NAT, PAT, socket format at transport level, socket interface and programming.

UNIT V APPLICATION LAYER

Client server architecture, domain name services, application services: HTTP, TELNET, RLOGIN, FTP, CBR, NFS, SMTP, POP, IMAP, MIME, voice and video over IP.

MICROPROCESSORS AND INTERFACING			
Course Code:	**EC304/EC559**	**Credits:**	**3**
No. of Lectures (Hrs/Week):	**3**	**Mid Sem Exam Hours:**	**2**
Total No. of Lectures:	**45**	**End Sem Exam Hours:**	**3**

UNIT I

Introduction to 8085 microprocessor: pin diagram, architecture, programming model, instruction set, and classification of instruction set, instruction and data format, timing diagram of instructions, basic concept of programming, addressing modes of 8085 microprocessors.

UNIT II

Microprocessor 8086 architecture, BIU and EU, registers, pin diagram, memory addressing, clock generator 8284, buffers and latches, maximum and minimum modes.

UNIT III

Addressing Modes, Instruction set of 8086, assembly language programming, assemblers, procedures, macros, interrupts, 8086 based multiprocessor systems

UNIT IV

Interfacing Chips- IC 8155 (Static Ram with I/O Ports and Timer), 8755 (EPROM with I/O Ports), 8251A (USART), 8255A (Programmable Peripheral Interface), 8253/8254 (Programmable Interval Timer/Counter), 8257 (DMA Controller), 8259A (Programmable Interrupt Controller).

UNIT V

The 8051 architecture Microprocessor and Microcontroller, Comparison of microprocessors and microcontrollers Microcontroller survey, microcontrollers of different word length, make and features, selection criteria for microcontroller ,8051 microcontroller hardware, I/O pins and internal architecture internal RAM, ROM organization, I/O port circuits ,connecting external memory, addressing modes, instruction set and assembly language programming.

(SEMESTER - VI)

5-Year Dual Degree B. Tech. (Computer Science & Engineering) + M.Tech. / MBA

Effective from: 2011 -2012

COMPILER DESIGN			
Course Code:	**CS401**	**Credits:**	**4**
No. of Lectures (Hrs/Week):	**3+1**	**Mid Sem Exam Hours:**	**2**
Total No. of Lectures:	**45+15**	**End Sem Exam Hours:**	**3**

UNIT I INTRODUCTION TO COMPILER

Introduction to compiler, phases and passes, bootstrapping, finite state machines and regular expressions and their applications to lexical analysis, optimization of DFA-based pattern matchers implementation of lexical analyzers, lexical-analyzer generator, LEX-compiler, formal grammars and their application to syntax analysis, BNF notation, ambiguity, YACC, syntactic specification of programming languages: Context free grammars, derivation and parse trees, capabilities of CFG.

UNIT II PARSING TECHNIQUE

Parsers, shift reduce parsing, operator precedence parsing, top down parsing, predictive parsers Automatic construction of efficient parsers: LR parsers, the canonical collection of LR(0) items, constructing SLR parsing tables, constructing canonical LR parsing tables, constructing LALR parsing tables, using ambiguous grammars, an automatic parser generator, implementation of LR parsing tables.

UNIT III SYNTAX-DIRECTED TRANSLATION

Syntax-directed translation schemes, implementation of syntax directed translators, intermediate code, postfix notation, parse trees & syntax trees, three address code, quadruple & triples, translation of assignment statements, boolean expressions, statements that alter the flow of control, postfix translation, translation with a top down parser, more about translation: array references in arithmetic expressions, procedures call, declarations and case statements.

UNIT IV SYMBOL TABLES

Data structure for symbols tables, representing scope information, run-time administration: implementation of simple stack allocation scheme, storage allocation in block structured language, Error detection & recovery: lexical phase errors, syntactic phase errors, semantic errors.

UNIT V CODE GENERATION

Design issues, the target language. addresses in the target code, basic blocks and flow graphs, optimization of basic blocks, code generator. code optimization: machine-independent optimizations, loop optimization, DAG representation of basic blocks, value numbers and algebraic laws, global data-flow analysis

Effective from: 2011 -2012

OBJECT-ORIENTED ANALYSIS			
Course Code:	**CS403/CS527**	**Credits:**	**3**
No. of Lectures (Hrs/Week):	**3**	**Mid Sem Exam Hours:**	**2**
Total No. of Lectures:	**45**	**End Sem Exam Hours:**	**3**

UNIT I OBJECT-ORIENTED DESIGN FUNDAMENTALS

Object model, classes and objects, complexity, classification, notation, process, pragmatics, binary and entity relationship, object types, object state, Object-Oriented Software Development (OOSD) life cycle, foundations of the object-oriented approach, concept of objects, object vs. classes, encapsulation, aggregation, inheritance and polymorphism, de-facto industry standard for general-purpose object-oriented modeling.

UNIT II OBJECT-ORIENTED ANALYSIS

Overview of object analysis: Shater/Mellor, Coad/Yourdon, Rumbaugh, Booch, usecase, conceptual model, behavior, class, analysis patterns, aggregation, advanced principles and strategies for object-oriented analysis and design, encapsulation and connascence, encumbrance and cohesion, type conformance and closed behavior, application of analysis and design patterns.

UNIT III OBJECT-ORIENTED DESIGN METHODS

Unified Modeling Language (UML), diagrams, collaboration, sequence, class, design patterns and frameworks, comparison with other design methods, diagramming and notational techniques within UML, visual nature of UML, CASE tools, structural models in UML, through the use of class diagrams, component diagrams and deployment diagrams, behavioural models in UML, through the use of use-case models, state-chart diagrams and activity diagrams.

UNIT IV OBJECT-ORIENTED DEVELOPMENT METHODOLOGY

Managing analysis and design, evaluation testing, coding, maintenance, metrics, importance of development methodology, object-oriented processes in the context of a development life cycle, Rational Unified Process (RUP), RUP splits project life cycle into four phases: inception, elaboration, construction and transition, workflows and models within each phase.

UNIT V REQUIREMENT, DESIGN AND ANALYSIS MODELLING

Requirements modeling, requirement model principle, use-case models, domain object models, documentation the requirements model, challenges and benefits of requirement modeling, agile requirement modeling, design of foundation class libraries, object-oriented databases, client/server computing, middleware, design modeling, design vs. analysis, persistent objects, design of classes, cohesion and coupling, documenting the design model, analysis modeling, use-case analysis, analysis models.

5-Year Dual Degree B. Tech. (Computer Science & Engineering) + M.Tech. / MBA

Effective from: 2011 -2012

FORMAL METHODS			
Course Code:	**CS405**	**Credits:**	**4**
No. of Lectures (Hrs/Week):	**3+1**	**Mid Sem Exam Hours:**	**2**
Total No. of Lectures:	**45+15**	**End Sem Exam Hours:**	**3**

UNIT I INTRODUCTION

Why formal methods were developed, problems in natural language specifications, formal versus informal programming, advantages of formal methods, requirements of formal system, types, prepositional logic, predicate logic, relationships and functions.

UNIT II FORMAL SPECIFICATION STYLE

Model-oriented, specifications, concurrency-based specifications, example specification languages.

UNIT III VDM

Introduction to VDM, basic types, quote types, compound types, optional types, functions, operations, additional constructs, modules.

UNIT IV THE Z NOTATION

Interchange language, user-defined identifiers, data types, basic types, compound types, schemas, additional constructs.

UNIT V FORMAL SEMANTICS AND TOOLS

Operational semantics, denotationa, semantics, axiomatic semantics proof editors, proof analyzer, symbolic simulators, translators, test generation tools.

Text Books:

1. Andrew Harry, "Formal Methods: Fact File VDM and Z", John Wiley and Sons,1996.

Reference Books

SOFTWARE PROJECT MANAGEMENT			
Course Code:	**CS541/CS441**	**Credits:**	**3**
No. of Lectures (Hrs/Week):	**3**	**Mid Sem Exam Hours:**	**2**
Total No. of Lectures:	**45**	**End Sem Exam Hours:**	**3**

UNIT I INTRODUCTION TO SOFTWARE PROJECT MANAGEMENT

Scope of project management, project life cycle, software project planning- Step by Step planning, Introduction of project management activities: cost estimation, project scheduling, staffing, software configuration management, quality assurance, project monitoring, risk management, problem with software projects, roles and responsibilities of software project manager.

UNIT II PROJECT EVALUATION AND APPROACHES

Project management and evaluation: Cost benefit analysis, payback period, NPV, ROI, Selection of appropriate project approach: Waterfall model, V-process model, prototyping, spiral model, incremental delivery, iterative process. Capability Maturity Model (CMM).

UNIT III ACTIVITIES PLANNING AND RISK MANAGEMENT

Project scheduling, Project network diagram fundamentals, PERT techniques, Gantt charts, Risk assessment, planning and management, Resource allocation: creating critipaths, scheduling, cost schedules. Monitoring and controlling the projects. Introduction to Microsoft Project.

UNIT IV MONITORING PROJECTS AND CONTRACTS

Monitoring the progress of projects, accessing the risk of slippage, reporting, earned value analysis, control procedures, Managing Contracts: stages needed to acquire software, types of contracts contents of contracts and the evaluation of proposal on the basis of contracts.

UNIT V PROJECT QUALITY AND PEOPLE ISSUES

People: player, team leader, software team, coordination and communication issues; inducting motivating teams, improving efficiency, Software quality and its importance defining, designing and monitoring the software quality.

Reference Books:

13. Software Engineering, Ian Sommerville, Pearson Education, 2009.

5-Year Dual Degree B. Tech. (Computer Science & Engineering) + M.Tech. / MBA

Effective from: 2011 -2012

OBJECT-ORIENTED SOFTWARE ENGINEERING			
Course Code:	**CS543/CS443**	**Credits:**	**3**
No. of Lectures (Hrs/Week):	**3**	**Mid Sem Exam Hours:**	**2**
Total No. of Lectures:	**45**	**End Sem Exam Hours:**	**3**

UNIT I OBJECT-ORIENTED SOFTWARE ENGINEERING

OOSE, object-orientation paradigm, object-oriented analysis, basic concepts, use cases, analysis, stereotypes and objects, analysis patterns, object modeling languages, object-oriented design: basic concepts, design stereotypes and objects, design patterns; object-oriented programming: basic concepts, idioms, object-oriented programming languages, application frameworks, object-oriented case tools, state transition and interaction diagrams, testing of object-oriented programs.

UNIT II ADVANCED OBJECT-ORIENTED ANALYSIS AND DESIGN

Frameworks and design patterns, design for reusability, advanced object-oriented programming techniques, design using object-oriented databases and distributed object architectures, design of software agents, project involving object-oriented analysis, design, and implementation.

UNIT III DESIGNING SOFTWARE USING PATTERNS

Process of design, principles, techniques, software architecture, architectural patterns, abstraction-occurrence pattern, hierarchy pattern, player-role pattern, singleton pattern, observe pattern, delegation pattern, adapter pattern, facade pattern, immutable pattern, read only interface pattern, proxy pattern.

UNIT IV OBJCET-ORIENTED METRICS

Measure, metrics and indicators, software measurement, metrics for object-oriented software development environments, characteristic of object-oriented metrics, Chidamber & Kemerer's metrics suite: Weighted Methods Per Class (WMC), Depth of Inheritance Tree (DIT), Number of Children (NOC), Coupling Between Object Classes (CBO), Response For a Class (RFC), Lack of Cohesion in Methods (LCOM), Lorenz and Kidds' metrics, metrics for object-oriented metrics projects: management process, development process, application size, staffing size, scheduling.

UNIT V DESIGN METRICS AND OBJCET-ORIENTED TESTING

Design metrics overview, method size, method internals, class size, class inheritance, method inheritance, class internals, MOOD (Metrics for Object-Oriented Design): Method Hiding Factor (MHF), Attribute Hiding Factor (AHF), Method Inheritance Factor (MIF), Attribute Inheritance Factor (AIF), Polymorphism Factor (PF), Coupling Factor (CF), object-oriented testing, test case design for object-oriented software, testing methods at class level: random testing of object-oriented class; interclass test case design: multiple class testing, test derived from behavior models.

Reference Books:

10. Software Engineering, Ian Sommerville, Pearson Education, 2009.

5-Year Dual Degree B. Tech. (Computer Science & Engineering) + M.Tech. / MBA

Effective from: 2011 -2012

INFORMATION SECURITY			
Course Code:	**CS545/CS445**	**Credits:**	**3**
No. of Lectures (Hrs/Week):	**3**	**Mid Sem Exam Hours:**	**2**
Total No. of Lectures:	**45**	**End Sem Exam Hours:**	**3**

UNIT I INTRODUCTION

Security problem in computing, threat scenarios, critical infrastructures, security targets and policies, security mechanisms, examples of applications and their different security requirements, multi-lateral security, privacy and data protection, computer misuse legislation, operating system and network security, cyber laws, , hacking , anti hacking solution, case studies of modern antivirus software, Computer Emergency Response Team (CERT) functionality, NIST, Introduce RFC related to security.

UNIT II SECURITY MODELS

Military and Civil Security, vulnerability and threat models, end-end security (COMSEC), link Encryption (TRANSEC), compartments, privacy, authentication, denial of service, no repudiation, private-key and public-key cryptographic algorithms: DES, RSA, SHA, encapsulation, encryption principles, issues in multi-level secure systems, Internet security models: IPv4/IPv6 encapsulation header, digital signature standard,

UNIT III SECURITY POLICIES AND DESIGN GUIDELINES

Policies, policy creation, regularity considerations, and privacy regulations, security: infrastructure and components, design guidelines, authentication: authorization and accounting, physical and logical access control, user authentication: biometric devices. open source software for network security quantum cryptography, Microsoft cryptography toolkit, cryptographic solution using java .

UNIT IV OSI LAYER SECURITY

Secure SNMP, secure routing interoperability: IP Security, virtual networks (DART net/CAIRN), transparent and opaque network services, source masking and hidden channels, techniques for fault detection, isolation and repair, secure network infrastructure services: DNS, NTP, SNMP, privacy Enhanced Mail (PEM), secure binding of multimedia streams, secure RTP, secure RSVP, mobile systems: Address Export and re-use, Secure Session Layer (SSL), Secure Hypertext Transfer Protocol (SHTTP), Time Stamping Protocol (TSP), email security, Firewall platforms, partitioning models and methods,

UNIT V KEY AND CERTIFICATE MANAGEMENT

Secure binding of public and private values: DNS certificates, making and distributing key media: randomization, lifetime issues, key agreement protocols: STS protocol and IETF work orders, key escrow: clipper chip, one-time passwords: schemes based on S/KEY, PKI components and applications, exploiting diversity and redundancy: byzantine generals, time stamping and reliable ordering of events: NTP, consensus and agreement protocols, security in wireless networks, shared secret data authentication: token based/ public key based, session key management: blind key cryptosystems.

Reference Books:

1. Information Security, Principal and practices,Mark Merkow, Jim Breithaupty, Person 2007
2. Cryptography and Network Security: Theory and Practice, Stallings, John Wiley, 2006.

4. Computer Security, Gollmann, D., Wiley Edition, 1999.
5. Cryptography, Theory and Practice, Stinson D., CRC Press, Boca Raton, FA, 1995.
6. Security Engineering: A Guide to Building Dependable Distributed Systems, Anderson R., Wiley, 2nd edition, 2008.
7. Web Security: A Step-by-Step Reference Guide, Stein L., Addison Wesley Longman, Inc., 1998.

5-Year Dual Degree B. Tech. (Computer Science & Engineering) + M.Tech. / MBA

Effective from: 2011 -2012

MULTIMEDIA TECHNIQUES			
Course Code:	**CS547/CS447**	**Credits:**	**3**
No. of Lectures (Hrs/Week):	**3**	**Mid Sem Exam Hours:**	**2**
Total No. of Lectures:	**45**	**End Sem Exam Hours:**	**3**

UNIT I INTRODUCTION

Introduction to multimedia, multimedia information, multimedia objects, multimedia in business and work, convergence of computer, communication and entertainment products, multimedia hardware, Memory & storage devices, Communication devices, Multimedia software's, presentation tools, tools for object generations, video, sound, image capturing, authoring tools, card and page based authoring tools.

UNIT II MULTIMEDIA BUILDING BLOCKS

Text, sound MIDI, digital audio, audio file formats, MIDI under windows environment audio & video capture.

UNIT III DATA COMPRESSION

Huffman coding, Shannon Fano algorithm, Huffman algorithms, adaptive Coding, arithmetic coding Higher order modeling, finite context modeling, dictionary based compression, sliding window compression, LZ77, LZW compression, compression, compression ratio loss less & lossy compression.

UNIT IV SPEECH COMPRESSION & SYNTHESIS

Digital Audio concepts, sampling variables, loss less compression of sound, loss compression & silence compression.

UNIT V IMAGES

Multiple monitors, bitmaps, vector drawing, lossy graphic compression, image file formatting animations Images standards, JPEG Compression, Zig Zag coding, multimedia database, content based retrieval for text and images, video: video representation, colors, video compression, MPEG standards, MHEG standard video Streaming on net, video conferencing, multimedia broadcast services, indexing and retrieval of video database, recent development in multimedia.

Reference Books:

1. Tay Vaughan “Multimedia, Making IT Work” Osborne McGraw Hill.
2. Buford “Multimedia Systems” Addison Wesley.
3. Agrawal & Tiwari “Multimedia Systems” Excel.
4. Mark Nelson “Data Compression Book” BPB.
5. David Hillman “Multimedia technology and Applications” Galgotia Publications.
6. Rosch “Multimedia Bible” Sams Publishing.
7. Sleinreitz “Multimedia System” Addison Wesley.
8. James E Skuman “Multimedia in Action” Vikas.

5-Year Dual Degree B. Tech. (Computer Science & Engineering) + M.Tech. / MBA

Effective from: 2011 -2012

SOFT COMPUTING			
Course Code:	**CS449/CS561**	**Credits:**	**3**
No. of Lectures (Hrs/Week):	**3**	**Mid Sem Exam Hours:**	**2**
Total No. of Lectures:	**45**	**End Sem Exam Hours:**	**3**

UNIT I FUZZY LOGIC

Introduction to fuzzy logic, classical and fuzzy sets, overview of fuzzy sets, membership function, fuzzy rule generation, operations on fuzzy sets: compliment, intersection, union, combinations on operations, aggregation operation.

UNIT II FUZZY ARITHMETIC

Fuzzy numbers, linguistic variables, arithmetic operations on intervals & numbers, uncertainty based information, information and uncertainty, no specificity of fuzzy and crisp sets, fuzziness of fuzzy sets.

UNIT III NEURAL NETWORK

Overview of biological neurons, computational neuron, mathematical model of neurons, ANN architecture, single layer and multilayer architectures, activation function, threshold value, self learning and forced learning algorithms, feed forward and feedback architectures.

UNIT IV LEARNING FUNDAMENTALS

Learning paradigms, supervised and unsupervised learning, reinforced learning, ANN training, algorithms perceptions, training rules, delta, back propagation algorithm, multilayer perception model, Hopfield networks, associative memories, applications of artificial neural networks,

UNIT V GENETIC ALGORITHMS

History of genetic algorithm, terminology of genetic algorithm, biological background, creation of offspring, working principles of genetic algorithms, fitness function, reproduction: Roulette wheel selection, Boltzmann selection, cross over mutation, inversion, deletion, and duplication, generation cycle.

Reference Books:

1. Artificial Neural Networks: An introduction to ANN Theory and Practice, Peteus J. Braspenning, PHI publication, 2005.
2. Fuzzy Logic: A spectrum of Theoretical and Practical issues, Paul P. Wang, pearson publication 2004.
3. Fuzzy Sets, Fuzzy logic, and Fuzzy Systems: Selected Papers- Lotfi Asker Zadeh, George J. Kilr, Bo yuan, 2005.
4. Foundations of Fuzzy logic and Soft Computing: 12th International Fuzzy conference proceeding, 2005.
5. Neural Networks Theory, Particia Melin, Oxford University press, 2003
6. Neural Networks Theory and Application, Oscar Castillo, Wiley Eastern publication 2003.

5-Year Dual Degree B. Tech. (Computer Science & Engineering) + M.Tech. / MBA

Effective from: 2011 -2012

NATURAL LANGUAGE PROCESSING			
Course Code:	**CS451/CS551**	**Credits:**	**3**
No. of Lectures (Hrs/Week):	**3**	**Mid Sem Exam Hours:**	**2**
Total No. of Lectures:	**45**	**End Sem Exam Hours:**	**3**

UNIT I INTRODUCTION

Fundamental aspects of natural language processing, brief history of natural language processing, significance of natural language processing, some early natural language processing systems like ELIZA, LUNAR, SHRDLU, practical front ends, general NLP system, role of knowledge in language processing, fundamental aspects of English grammar

UNIT II PHASES OF NATURAL LANGUAGE PROCESSING

Various phases of natural language processing: phonological analysis, morphological analysis, lexical analysis, syntactic analysis, semantic analysis, pragmatic and discourse analysis, parsing techniques: top down parsing, bottom up parsing bidirectional parsing, deterministic parsing, non deterministic parsing, comparison of various parsing techniques.

UNIT III APPROACHES TO SYNTACTIC ANALYSIS

Word class and part of speech tagging, rule based part of speech tagging, stochastic part of speech tagging, HMM algorithm of tagging, basic parsing techniques, top down parsing, bottom up parsing, comparison of top down and bottom up parsing, problems of top down and bottom up parser, left recursion, ambiguity, repeated parsing of subtrees, Early algorithm.

UNIT IV APPROACHES TO SEMANTIC ANALYSIS

Syntax driven semantic analysis, lexical semantic approach, use of knowledge for language analysis, representation of knowledge for language analysis, first order predicate calculus, concept of pragmatic and discourse analysis, concept of anaphora, basic types of anaphora, some elementary anaphora resolution approaches.

UNIT V TRANSITION NETWORKS AND GRAMMARS

Concept of transition network, use of transition network for basic language analysis, recursive transition network, augmented transition network, fundamental aspects of grammars, context free grammars, feature and augmented grammars, unification grammar, Fillmore's grammar.

Text Books:

1. Natural language understanding, James Allen: Tata Mc Graw hill publishing house, 2004.
2. Language and speech processing, James Martin: PHI publication, 2003.

References:

1. Natural Language Processing, Gazdar, PHI publication, 2004.
2. Natural Language Processing, Sampson, Narosa publication, 2005.

5-Year Dual Degree B. Tech. (Computer Science & Engineering) + M.Tech. / MBA

Effective from: 2011 -2012

MACHINE TRANSLATION and LEARNING			
Course Code:	**CS457/CS557**	**Credits:**	**3**
No. of Lectures (Hrs/Week):	**3**	**Mid Sem Exam Hours:**	**2**
Total No. of Lectures:	**45**	**End Sem Exam Hours:**	**3**

UNIT I OVERVIEW OF MACHINE TRANSLATION

Definition, fundamental concepts, applications, language similarities and differences, cross language information retrieval, computer aided human translation, sublanguage classification, concept of polysynthetic language, Sapir – Whorf hypothesis, concept of ontology, direct vs. indirect translation, statistical model of machine translation.

UNIT II DIFFERENT MACHINE TRANSLATION MODELS

Graphical models: belief networks, Bayesian networks, Hidden Markov models, incremental learning, reinforcement learning, machine learning applications.

UNIT III MACHINE TRANSLATION METHODOLOGIES

Decision trees, linear discrimination, Neural networks, support vector machines (SVMs), quantifying fluency and faithfulness, usability and system development, direct transfer, quantifying fluency and faithfulness, boosting and bagging, naive Bayes classifiers, gradient-descent, Q-learning.

UNIT IV MACHINE-LEARNING FUNDAMENTALS

Classification, regression and clustering; noisy, noise-free and incomplete data; supervised and unsupervised learning; hypothesis classes, model complexity, model selection, Ockham's razor and bias-variance dilemma, dynamic environments, reinforcement learning and the exploration-exploitation dilemma.

UNIT V BASIC LEARNING METHODS

Unsupervised learning: K-means, vector quantization, self-organizing neural networks. Supervised learning: K nearest neighbor, learning vector quantization, decision tree, supervised neural networks, the transfer metaphor, syntactic transformations, lexical transformations.

Text Books:

1. Machine Translation of Languages, Wilen Sky R. Planning and understanding, Addison Wisely, Reading MA, 2003.
2. Artificial Neural Networks: An Introduction to ANN Theory and Practice by Peteus J. Braspenning, PHI publication, 2005.

References Books:

1. A New Approach to Machine Translation, Russel S, and Norvig P, Pearson education publication, 2003.
2. Evolutionary Language Understanding, Sampson G. Mc. Graw Hill publication, 2002.
3. The Machine Translation perspective, Schank, R.C., PHI publication 2000.

5-Year Dual Degree B. Tech. (Computer Science & Engineering) + M.Tech. / MBA
Effective from: 2011 -2012

INTELLIGENT SYSTEM

(SEMESTER – VIII)

5-Year Dual Degree B. Tech. (Computer Science & Engineering) + M.Tech. / MBA

Effective from: 2011 -2012

SOFT COMPUTING TECHNIQUES			
Course Code:	**CS562**	**Credits:**	**3**
No. of Lectures (Hrs/Week):	**3**	**Mid Sem Exam Hours:**	**2**
Total No. of Lectures:	**45**	**End Sem Exam Hours:**	**3**

UNIT I FUZZY LOGIC

Introduction to fuzzy logic, classical and fuzzy sets, overview of fuzzy sets, membership function, fuzzy rule generation, operations on fuzzy sets: compliment, intersection, union, combinations on operations, aggregation operation.

UNIT II FUZZY ARITHMETIC

Fuzzy numbers, linguistic variables, arithmetic operations on intervals & numbers, uncertainty based information, information and uncertainty, no specificity of fuzzy and crisp sets, fuzziness of fuzzy sets.

UNIT III NEURAL NETWORK

Overview of biological neurons, computational neuron, mathematical model of neurons, ANN architecture, single layer and multilayer architectures, activation function, threshold value, self learning and forced learning algorithms, feed forward and feedback architectures.

UNIT IV LEARNING FUNDAMENTALS

Learning paradigms, supervised and unsupervised learning, reinforced learning, ANN training, algorithms perceptions, training rules, delta, back propagation algorithm, multilayer perception model, Hopfield networks, associative memories, applications of artificial neural networks,

UNIT V GENETIC ALGORITHMS

History of genetic algorithm, terminology of genetic algorithm, biological background, creation of offspring, working principles of genetic algorithms, fitness function, reproduction: Roulette wheel selection, Boltzmann selection, cross over mutation, inversion, deletion, and duplication, generation cycle.

UNIT VI CONCEPT OF UNCERTAINTY

Presence of uncertainty in real world problems, handling uncertain knowledge, degree of belief, degree of disbelief, uncertainty and rational decisions, decision theory, utility theory, concept of independent events, Bay's rule, using Bay's rule for combining events.

Text Books:

7. Artificial Neural Networks: An introduction to ANN Theory and Practice, Peteus J. Braspenning, PHI publication, 2005.
8. Fuzzy Logic: A spectrum of Theoretical and Practical issues, Paul P. Wang, pearson publication 2004.

Reference Books:

9. Fuzzy Sets, Fuzzy logic, and Fuzzy Systems: Selected Papers- Lotfi Asker Zadeh, George J. Kilr, Bo yuan, 2005.
10. Foundations of Fuzzy logic and Soft Computing: 12th International Fuzzy conference proceeding, 2005.
11. Neural Networks Theory, Particia Melin, Oxford University press, 2003
12. Neural Networks Theory and Application, Oscar Castillo, Wiley Eastern publication

5-Year Dual Degree B. Tech. (Computer Science & Engineering) + M.Tech. / MBA

Effective from: 2011 -2012

AI PROGRAMMING LANGUAGES			
Course Code:	**CS564**	**Credits:**	**3**
No. of Lectures (Hrs/Week):	**3**	**Mid Sem Exam Hours:**	**2**
Total No. of Lectures:	**45**	**End Sem Exam Hours:**	**3**

UNIT I PROPOSITIONAL CALCULUS

Syntax and semantics of propositional calculus, Atomic symbol, logical connectives, the semantics of propositional calculus, well formed formula, properties of statements, inferencing in propositional logic, concept of inferencing, modus ponen and modus tollen rules, equivalence, validity, and satisfiability, agent based propositional logic.

UNIT II PREDICATE LOGIC

Syntax of predicate logic, predicate logic symbols, constants, variables, functions, terms, predicates, connectives, quantifiers, semantics of predicate logic, representation of facts using predicate logic, quantifiers, inferencing in predicate logic.

UNIT III RESOLUTION

Concept and process of resolution, concept of theorem proving, disjunctive and conjunctive normal form, conversion of a wff statement into clausal form, Solemnization, resolution algorithm, completes of resolution, types of resolution, unit resolution, binary resolution, linear resolution, unification, unification algorithm, applications of resolution.

UNIT IV LOGIC PROGRAMMING

The order of logic, first order logic, existential and universal quantifier, nested quantifier, The concept of programming, algorithm development for the facts represented in form of logic, techniques of standard program design, writing example programs.

UNIT V PROLOG and LISP LANGUAGE

Syntax of Prolog, basic data types of PROLOG, properties and array list, control structures, input output statements, creating rule base in PROLOG, writing programs in Prolog, Syntax of LISP, properties of LIST, representation and storage of list, function, basic data types of LISP, input output statements, control structure of LISP, writing programs in LISP.

Text Books:

1. Prolog Programming, Russel Norvig, Addison Wisely publication 2006.
2. LISP programming, James Martin, PHI publication, 2002.

Reference Books:

1. Artificial Intelligence, Winston, Addison Wisely publication, 2005.
2. Prolog Programming for Artificial Intelligence , Brakta L, Addison wisely publication, 2006.
3. Programming Expert System in OPS5: An Introduction to Rule Based Programming Browston, 2005.

5-Year Dual Degree B. Tech. (Computer Science & Engineering) + M.Tech. / MBA
Effective from: 2011 -2012

INTELLIGENT SYSTEM

(ELECTIVES - 2 & 3)

5-Year Dual Degree B. Tech. (Computer Science & Engineering) + M.Tech. / MBA

Effective from: 2011 -2012

KNOWLEDGE ENGINEERING			
Course Code:	**CS566/CS462**	**Credits:**	**3**
No. of Lectures (Hrs/Week):	**3**	**Mid Sem Exam Hours:**	**2**
Total No. of Lectures:	**45**	**End Sem Exam Hours:**	**3**

UNIT I FUNDAMENTALS OF KNOWLEDGE

Concept of knowledge, types of knowledge, declarative knowledge, procedural knowledge, inheritable knowledge, inferential knowledge, relational knowledge, heuristic knowledge, commonsense knowledge, explicit knowledge, tacit knowledge, uncertain knowledge.

UNIT II KNOWLEDGE REPRESENTATION

The need of knowledge representation, levels of knowledge representation, granularity of knowledge representation, granularity vs. size of knowledgebase, techniques of knowledge representation, frames, reasoning with frames, frame based knowledge representation, semantic network, partitioned semantic nets, conceptual graphs, scripts.

UNIT III KNOWLEDGE STORAGE AND ACQUISITION

Need of knowledge storage, characteristic of good knowledge representation, knowledge acquisition, indexing techniques, fuzzy distance calculation, issues in knowledge acquisition, requirements of knowledge acquisition techniques, issues in knowledge acquisition in organization, knowledge organization and management, consistency of knowledge representation.

UNIT IV KNOWLEDGE ORGANISATION AND MANAGEMENT

Need of organizing the knowledge, techniques of knowledge organization, forward reasoning and backward reasoning, combination of forward and backward chaining, matching, conflict resolution, information retrieval from knowledge base, indexing, matching, RETE matching algorithm.

UNIT V APPLICATIONS OF KNOWLEDGE

Knowledge reuse technique in the designing of expert systems, components of knowledge engineering based problem solution methodology: identification of task, assembly of relevant knowledge, identification of lexicon, encoding general and domain specific knowledge, choosing inference procedure, identifying the bugs, rule based systems, blackboard architectures.

Text Books:

1. Artificial Intelligence and Knowledge Engineering, Winston, PHI publication , 2004.
2. Conceptual Information Processing, R.C Schank, Amsterdum North Holland, 2003.

Reference Books:

1. The basic concepts of knowledge engineering by Shank and J.G. Carbonell, PHI publication, 2003.
2. Principles of Artificial intelligence, Nillson, N.J., Morgan Kaufmann publication, 2004.
   Knowledge Management, by Shelda Debowski, John Wiley & Sons publication,

5-Year Dual Degree B. Tech. (Computer Science & Engineering) + M.Tech. / MBA

Effective from: 2011 -2012

PATTERN MATCHING			
Course Code:	**CS568/CS464**	**Credits:**	**3**
No. of Lectures (Hrs/Week):	**3**	**Mid Sem Exam Hours:**	**2**
Total No. of Lectures:	**45**	**End Sem Exam Hours:**	**3**

UNIT I INTRODUCTION AND BAYESIAN DECISION THEORY

Introduction to pattern recognition, Systems, design cycles, learning and adaptation, Bayesian decision theory, minimum error-rate classification, classifiers, discriminate functions and decisions surfaces.

UNIT II MAXIMUM – LIKELIHOOD AND BAYESIAN PARAMETER ESTIMATION

Maximum – Likelihood estimation, Bayesian estimation, Bayesian parameter estimation, Gaussian case and general theory, problems of dimensionality, Hidden Markov models, rules for pattern matching, incremental forward chaining, matching with known facts, data complexity.

UNIT III NONPARAMETRIC TECHNIQUES

Density estimation, parazen windows, Kn – Nearest neighbor estimation, nearest neighbor node metric technique.

UNIT IV LINEAR DISCRIMINATE FUNCTIONS

Linear discriminate functions and decision surfaces, generalized linear discriminate functions, two category uniformly separate case, minimizing the perception criterion function, relaxation procedures, nonseperable behavior, minimum squared-error procedures, Ho–Kashyap Procedures, support vector machines, multicategory generalization.

UNIT V UNSUPERVISED LEARNING

Clustering mixture densities and identifiability, maximum, likelihood estimation, application to normal mixtures, unemperouses, Bayesian learning, Data descriptions and controls, criterion function for clustering, interface, optimization, hierarchical clustering, component analysis, low dimension representation and multidimensional scaling.

Text Books:

1. Pattern Classification Richard O. Duda, Peter E. Hart and David G. Stork," 2nd Edition, John Wiley, 2003.
2. Introduction to the theory of Neural Computation, John Hertz, Andres Krogh & Richard G. Palmer, Addison Wesley, 2004.

References:

1. "Learning from Data-Concepts, Theory and Methods, Cherkassky V., F. Kulier, John Wiley, New York, 1998.
2. Neurocomputing: Foundations of Research, MIT Press, Cambridge Anderson J.A., E. Rosenfield, MA, 1988.
3. Self-Organizing Maps, Kohonen T., 2nd Ed., Springer Verlag, Berlin, 1997.
   Pattern Recognition by Devrophi publication, 1996.

5-Year Dual Degree B. Tech. (Computer Science & Engineering) + M.Tech. / MBA

Effective from: 2011 -2012

NEURAL NETWORK			
Course Code:	**CS570/CS466**	**Credits:**	**3**
No. of Lectures (Hrs/Week):	**3**	**Mid Sem Exam Hours:**	**2**
Total No. of Lectures:	**45**	**End Sem Exam Hours:**	**3**

UNIT I INTRODUCTION TO NEURAL NETWORKS

Biological Neuron, analogy of biological and artificial neuron, architecture classification, neural models, learning paradigm and rule, single unit mapping and the perception.

UNIT II FEED FORWARD NETWORKS

Review of optimization methods, back propagation, variation on back propagation, FFANN mapping capability, activation function of neural networks, network structures, single layer feed forward neural networks (perceptions'), Learning rate of neuron, multilayer feed forward neural network, Kernel function, boosted neural network, support vector machine, virtual support machine, shape matching.

UNIT III MULTILAYER NEURAL NETWORKS

Feed forward operations and classifications, back propagation algorithm, error factors, back propagation as feature & mapping, back propagation, buyer theory and probability, practical techniques for improving back propagation, regularization, complexity adjustment and pruning.

UNIT IV MATHEMATICAL PROPERTIES OF NEURAL NETWORKS

Formulation of mathematical model of FFANN's, Generalization, Bios & variance Dilemma, Radial Basis Function networks, back propagation algorithm, nearest neighbor and instance based learning methods.

UNIT V APPLICATION OF NEURAL NETWORK

PCA, SOM, LVQ, Hopfield networks, associative memories, RBF Networks, applications of Artificial Neural Networks (ANN) to function approximation, regression, classification, blind source separation, time series and forecasting.

Text Books:

1. Neural Networks-A Comprehensive Foundations, Haykin S., Prentice-Hall International, New Jersey, 1999.
2. An Introduction to Neural Networks, Anderson J.A., PHI, 1999.

Reference Books:

1. Introduction to the Theory of Neural Computation, Hertz J, Krogh A, R.G. Palmer, " Addison-Wesley, California, 1991.
2. Introduction to the Theory of Neural Computation, Hertz J, Krogh A, R.G. Palmer, , Addison-Wesley, California, 1991.
3. Neural Networks: Algorithms, Applications and Programming Techniques, Freeman J.A., D.M. Skapura, , Addison-Wesley, Reading, Mass, (1992).

5-Year Dual Degree B. Tech. (Computer Science & Engineering) + M.Tech. / MBA

Effective from: 2011 -2012

DISCOURSE ANALYSIS AND NATURAL LANGUAGE GENERATION			
Course Code:	**CS572/CS468**	**Credits:**	**3**
No. of Lectures (Hrs/Week):	**3**	**Mid Sem Exam Hours:**	**2**
Total No. of Lectures:	**45**	**End Sem Exam Hours:**	**3**

UNIT I INTRODUCTION TO DISCOURSE

Concept of discourse, characteristics of discourse, difference between normal text and discourse, basic terminology used in analysis of discourse, coherence phenomenon, text analysis, different cohesive relations like anaphoric, cataphoric, endophoric and exophoric, analytical treatment of cohesive relations.

UNIT II BASIC REFERENCE PHENOMENON

Concept of anaphora, types of anaphora, indefinite noun phrase, definite noun phrase, pronoun, syntactic and semantic constraints on co-reference, number agreement, person and case agreement, gender agreement.

UNIT III PERENCES IN PRONOUN INTERPRETATION

Recency, grammatical role, repeated mention, parallelism, verb semantics, Lappin and Leass algorithm for anaphora resolution, tree search algorithm, cantering algorithm, inference based anaphora resolution algorithm,

UNIT IV DIALOGUE AND CONVERSATIOANL AGENTS

Difference between a dialogue and text, turns and utterances, grounding, conversational implicature, dialogue acts, automatic interpretation of dialogue acts, cue based interpretation of dialogue acts, dialogue structure and coherence dialogue managers in conversational agents.

UNIT V INTRODUCTION TO NATURAL LANGUAGE GENERATION

Features of language generation, difference between language analysis and language generation, components of language generation, case study of language generation systems, block diagram of natural language generator, content selection, lexical selection, sentence structure, aggregation, referring expression, discourse structure.

Reference Books:

1. Towards a Computational Theory of Definite Anaphora Comprehension in English discourse, Sidner, Pearson publication 2005.
2. Alternative Grammatical Encoding, Sampson, PHI publication, 2004.
3. Artificial Intelligence, Russel Norvig, PHI publication 2005.
4. Analysis of Syntax Based Pronoun Resolution Methods, Tetreault J.R. Wiley Eastern publication, 2000.
5. Machine Learning and Statistical Modeling Approaches to Image Retrieval, Chen, Li, and Wang, , Kluwer, 2004.

5-Year Dual Degree B. Tech. (Computer Science & Engineering) + M.Tech. / MBA
Effective from: 2011 -2012

INTELLIGENT SYSTEM

(SEMESTER - IX

5-Year Dual Degree B. Tech. (Computer Science & Engineering) + M.Tech. / MBA

Effective from: 2011 -2012

EXPERT SYSTEM			
Course Code:	**CS661**	**Credits:**	**3**
No. of Lectures (Hrs/Week):	**3**	**Mid Sem Exam Hours:**	**2**
Total No. of Lectures:	**45**	**End Sem Exam Hours:**	**3**

UNIT I INTRODUCTION TO EXPERT SYSTEM

Block diagram of expert system, features of expert system, characteristics of expert system, components of expert system, applications of expert systems, some standard expert systems.

UNIT II COMPONENTS OF EXPERT SYSTEM

Block diagram of expert system, design issues of expert systems, concept of interface design, issue of knowledgebase design, learning module design, limitations of expert systems, rule based systems.

UNIT III HUMAN INTELLIGENCE VS EXPERT SYSTEM

Comparison of skills of human experts and artificially developed expert systems, characteristics of expert systems, knowledge acquisition in expert system, methods of knowledge acquisition in expert system.

UNIT IV DESIGN CRITERIA OF EXPERT SYSTEM

Elementary concepts about designing of an expert system, the issues involved in designing of knowledgebase, user interface module, inferencing information from knowledge base.

UNIT V KNOWLEDGE MANAGEMENT IN EXPERT SYSTEM

Knowledge management (KM) principles and purposes, dynamic nature of KM system, Knowledge system technologies, KM subsystems, knowledge management system development, selecting the system and / or its relevant components, implementing and maintain the knowledge management systems.

Reference Books:

1. Measuring and Managing Knowledge for Expert System , Mc. Graw- hill Boston, 2001.
2. Dendral: Expert System, Feigenbaum et al, by PHI publication, 1992.
3. Modal Operators in expert systems, Berners Lee, Mc Garw hill publication, 2002.
4. The Frame Based Knowledge Representation in Expert Systems, Mc Carthy and Hays, PHI publication, 2003.
5. Decision Theoretic Expert Systems, Russel, Wiley Eastern publication, 2002.

5-Year Dual Degree B. Tech. (Computer Science & Engineering) + M.Tech. / MBA

Effective from: 2011 -2012

RESEARCH TECHNIQUES IN ICT			
Course Code:	**CS633/CS503**	**Credits:**	**3**
No. of Lectures (Hrs/Week):	**3**	**Mid Sem Exam Hours:**	**2**
Total No. of Lectures:	**45**	**End Sem Exam Hours:**	**3**

UNIT I INTRODUCTION TO RESEARCH TECHNIQUES

Meaning of research, objectives of research, motivation in research, types of research (Introduction to experimental test bed, algorithmic research, simulation research, mathematical modeling approach), characteristics and prerequisites of research, significance of research, research process, sources of research problem, criteria of identifying the problem, necessity of defining the problem, errors in selecting research problem, technique involved in defining the problem, report and paper writing.

UNIT II DATA ANALYSIS AND STATISTICAL TECHNIQUES

Data and their analyses, quantitative methods and techniques, Measure of central tendency, measures of variation, frequency distribution, analysis of variance, methods, Correlation analysis, regression analysis, time series and forecasting, introduction to discriminant analysis, factor analysis, cluster analysis, conjoint analysis, probability distribution, binomial distribution, poisson distribution, uniform distribution, exponential distribution, and normal distribution, sampling methods, test of hypothesis.

UNIT III MATHEMATICAM MODELING

Steps of modeling, operations research models like queuing theory, stochastic processes, application of models, conceptual framework development and validation techniques, optimization techniques.

UNIT IV ALGORITHMIC RESEARCH

Algorithmic research problems, types of algorithmic research, types of solution procedure, steps of development of algorithm, steps of algorithmic research, design of experiments,

UNIT V SIMULATION AND SOFT COMPUTING TECHNIQUES

Introduction to soft computing, artificial neural network, genetic algorithm, fuzzy logic and their applications, tools of soft computing, need for simulation, types of simulation, simulation language, fitting the problem to simulation study, simulation models, output analysis, data simulation packages like MATLAB, NS2, ANSYS, Cadence.

Reference Books:

1. Research Methodologies, R. Panneerselvam, Prentice Hall, 2007.
2. Research in Education, Best John V. and James V Kahn, Wiley eastern, 2005.
3. Elements of Educational Research, Sukhia, S.P., P.V. Mehrotra, and R.N. Mehrotra, PHI publication, 2003.
4. Methodology of Research Education, K. Setia, IEEE publication, 2004.
5. Research methodology, Methods and Techniques, Kothari, C.R., 2000.

5-Year Dual Degree B. Tech. (Computer Science & Engineering) + M.Tech. / MBA
Effective from: 2011 -2012

INTELLIGENT SYSTEM

(ELECTIVES - 4 & 5)

5-Year Dual Degree B. Tech. (Computer Science & Engineering) + M.Tech. / MBA

Effective from: 2011 -2012

INTELLIGENT INFORMATION RETRIEVAL			
Course Code:	**CS663/CS563**	**Credits:**	**3**
No. of Lectures (Hrs/Week):	**3**	**Mid Sem Exam Hours:**	**2**
Total No. of Lectures:	**45**	**End Sem Exam Hours:**	**3**

UNIT I INFORMATION RETRIEVAL FUNDAMENTALS

Text based information retrieval, examples of information retrieval, need of maintain the global information base, use of information for planning, reliability of information storage, redundancy in information storage, report on 21st Century Intelligent Systems, role of intelligent systems in e-governance.

UNIT II INFORMATION RETRIEVAL MODELS

Information retrieval using the Boolean model, dictionary and postings, dictionary based approaches of information retrieval, lists, adhoc information retrieval method, Indexing, scoring and term weighting, random vs. sequential search methods, the content based information retrieval system, consistency of retrieved information, accuracy and precision of retrieved information.

UNIT III INTERNET BASED INFORMATION RETRIEVAL METHODS

Vector space retrieval, relevance feedback and query expansion, XML retrieval probabilistic information retrieval, language models for information retrieval, text classification and Naive Bayes, web search basics, web crawling and indexes, evaluating information retrieval methods, concept of precision and recall.

UNIT IV AGENT-BASED INFORMATION RETRIEVAL

Ontology-based web agents, searching for Information in unstructured knowledge domains, intelligent adaptive Information agents, designing of agent for information retrieval, incorporation of AI concepts for design of intelligent agent,

UNIT V INFORMATION RETRIEVAL TECHNIQUES

Intelligent systems for finding Genes in DNA, using Information content to evaluate semantic similarity in information taxonomy.

Text Books:

1. Machine Learning and Statistical Modeling Approaches to Image Retrieval, Chen, Li, and Wang, , Kluwer, 2004.
2. Information Representation and Retrieval in the Digital Age, ASIS, Chu, Heting, , 2003.

Reference Books:

1. The Modern Algebra of Information Retrieval, Dominich, Sandor, Springer 2008.
2. Feldman, R. and Sanger, J. The Text Mining Handbook: Advanced Approaches in Analyzing Unstructured Data. Cambridge U. Press, 2006.
3. The Subject Approach to Information, Foskett, A. C., London, Lib. Assoc. Publ, 1996.

5-Year Dual Degree B. Tech. (Computer Science & Engineering) + M.Tech. / MBA

Effective from: 2011 -2012

DATA MINING IN AI			
Course Code:	**CS665/CS565**	**Credits:**	**3**
No. of Lectures (Hrs/Week):	**3**	**Mid Sem Exam Hours:**	**2**
Total No. of Lectures:	**45**	**End Sem Exam Hours:**	**3**

UNIT I INTRODUCTION

Data warehousing, data warehouse vs relational databases, various schemas, architecture, Data mining definition & task, KDD versus data mining, data mining architecture, data mining query languages.

UNIT II ELEMENTARY DATA MINING TECHNIQUES

Clustering techniques, classification and regression rules, characterization and discrimination, outlier analysis, evolution analysis, association rules.

UNIT III MINING ASSOCIATION RULES

The Apriori Algorithm, generating association rules, mining multilevel association rules, mining multidimensional association rules from relational databases, metarule-guided mining of association rules, constraint pushing, mining guided by rule constraints, Incremental mining.

UNIT IV CLUSTERING TECHNIQUES

Cluster analysis, partitioning methods: *k*-Means and *k*-Medoids, hierarchical methods, agglomerative and divisive hierarchical clustering, density- based methods, constraint based clustering.

UNIT V WEB MINING AND DATABASE MINING

Mining complex data objects, spatial databases, multimedia databases, time series and sequence data; mining text databases, web content mining, web structure mining, web usage mining, web mining techniques, role of agents in web mining.

Text Books:

1. Data Warehousing In the Real World, Sam Anahory & Dennis Murray, 1997.
2. Data Mining- Concepts & Techniques, Jiawei Han & Micheline Kamber, 2001, Morgan Kaufmann.

References:

1. Data Mining Techniques, Arun Pujar, University Press, Hyderbad, 2001.
2. Data Mining, Pieter Adriaans & Dolf Zantinge, Pearson,1997.
3. Data Warehousing, Data Miniing and OLTP; Alex Berson, 1997, Mc Graw Hill.
4. Data warehousing System; Mallach,Mc Graw Hill, 2000.

5-Year Dual Degree B. Tech. (Computer Science & Engineering) + M.Tech. / MBA

Effective from: 2011 -2012

SPEECH PROCESSING			
Course Code:	**CS667/CS567**	**Credits:**	**3**
No. of Lectures (Hrs/Week):	**3**	**Mid Sem Exam Hours:**	**2**
Total No. of Lectures:	**45**	**End Sem Exam Hours:**	**3**

UNIT I INTRODUCTION AND OVERVIEW

Fundamentals of speech processing, ambiguity and uncertainty in speech processing, representation of speech signal in electrical format, manipulation of speech signal, acquisition of speech signal, storage of speech signal.

UNIT II WAVE SHAPING OF SPEECH SIGNAL

Basic concept of wave shaping, Fourier series, representation of signal using Fourier series, calculation of bandwidth, sending a signal through the limited bandwidth channel, multiplexing and de-multiplexing of a signal.

UNIT III STRING EDIT DISTANCE

Key algorithmic tool: dynamic programming, use of dynamic programming in optimal alignment of sequences, string edit operations, edit distance, and examples of use in spelling correction, and machine translation.

UNIT IV PROBABILITY

Introduction to probability theory, concepts related to modern speech processing, events and counting, joint and conditional probability, marginal's, independence, Bayes rule, combining evidence. application of probability in speech processing, **non-probabilistic methods of speech processing.**

UNIT V INFORMATION THEORY

Concept of information, measurement of information in bits, characteristics of noiseless and noisy channel. Entropy, cross-entropy, information gain, application of information theory to some language phenomenon, probabilistic language modeling and its applications.

Text Books:

1. Introduction to Theory of Neural Computation, John Hertz, Andres Krogh & Richard G. Palmer, Addison Wesley, 2004.
2. A New Approach to Speech Processing, Russel S, and Norvig Prentice hall publication, 2003.

References:

1. Evolutionary speech processing by Sampson G, Mc. Graw Hill publication, 2004.
2.The Speech Translation, A New Perspective, Schank, R.C 2003.
3. "Mathematical Methods for Neural Network Analysis and Design", Golden R.M., MIT Press, Cambridge, MA, 1996.
4. Information Retrieval, Salton, Mc Graw Hill 1983.

5-Year Dual Degree B. Tech. (Computer Science & Engineering) + M.Tech. / MBA

Effective from: 2011 -2012

ROBOTICS			
Course Code:	**CS669/CS569**	**Credits:**	**3**
No. of Lectures (Hrs/Week):	**3**	**Mid Sem Exam Hours:**	**2**
Total No. of Lectures:	**45**	**End Sem Exam Hours:**	**3**

UNIT I THE KINEMATICS OF ROBOTICS

Forward and inverse kinematics, motion kinematics, low-level and high-level trajectory planning. static force and torque relations, internal sensory devices: position and velocity sensors, external sensory devices: force, tactile and proximity sensors, machine vision, robot programming: multi-level approach, programming techniques, world modeling, off-line programming and simulation.

UNIT II BASIC ROBOT FUNCTIONING

History of robots, types of robots, uses of robots, present status and future trends in robotics, overview of robot subsystems, Issues in designing and controlling robots: resolution, repeatability and accuracy, transmission, Robot configurations and concept of workspace, mechanisms and transmission, motion planning obstacle avoidance, configuration space, road map methods, graph search algorithms, potential field methods.

UNIT III SPATIAL DESCRIPTIONS

Descriptions, postings, orientations, and frames, mappings, operators : translations, rotations, and transformations, transformation arithmetic, transform equations, transformation of free vectors, computational considerations.

UNIT IV ROBOT ANATOMY

End effectors and actuators, Different types of grippers, vacuum and other methods of gripping. pneumatic, hydraulic and electric actuators, Sensors and controllers, internal and external sensors, position, velocity and acceleration sensors, proximity sensors, force sensors, laser range finder, camera, micro-controllers, centralized controllers, real time operating systems.

UNIT V TASK SPECIFICATION OF ROBOT

Point to point and continuous motion specifications for typical applications, joint interpolation, task space interpolation, executing user specified tasks, Robot analysis, position and orientation of rigid bodies, spatial mechanism description, Denavit-Hartenberg notation, homogenous transformation, forward and inverse position analysis, velocity mapping, static force analysis, singularities, acceleration mapping, robot control Independent joint control, PD and PID feedback, actuator models, nonlinearity of manipulator models, issues in nonlinear control, force feedback, hybrid control, Case studies: Robot in assembly (Puma). Mobile robot (Nataraj)

Reference Books:

1. Introduction to Robotics, Mechanics and control, John J. Craig, Pearson Education publication, 2004.
2. Robotic moments, S Mujtaba and R. Goldman , PHI publication, 2003.
3. An Advance Robotic Programming, A. Gilbert, American Robot corporation 1984.
4. Design of an Interactive Manipulator Programming environment, UMI Research Press, 1985.
5. Mechanical Engineering design, J Shigley, 3rd edition, Mc, Graw hill, New York 1977.
